Validation Report

China Resources Wind Power
VALIDATION OF THE CDM-PROJECT:
GUANGDONG NAN AO 26MW WIND POWER
PROJECT

REPORT NO. 1055158

2008, July 22

TÜV SÜD Industrie Service GmbH
Carbon Management Service
Westendstr. 199 - 80686 Munich – GERMANY

Report No.	Date of first issue	Revision No.	Date of this revision	Certificate No.
1055158	2007-07-01	3	2008-07-22	-

Subject: Validation of a CDM Project			
Accredited TÜV SÜD Unit: TÜV SÜD Industrie Service GmbH Certification Body "climate and energy" Westendstr. 199 - 80686 Munich FEDERAL REPUBLIC OF GERMANY		TÜV SÜD Contract Partner: Jiangsu TÜV Product Service Shanghai Branch P.R. China	
Client: China Resources Wind Power (Shantou) Room 2304, Building 11, Jianwai SOHO, No. 39 Dongsanhuan Zhonglu, Chaoyang District, Bei- jing 100022, P.R.China		Project Site(s): Nan Ao Island, Guangdong Province People's Republic of China; 117°5'27.73"East and 23°25'12.63" North longi- tude	
Project Title: Guangdong Nan Ao 26MW Wind Power Project			
Applied Methodology / Version: ACM0002 version 06		Scope(s): 1	
First PDD Version: Date of issuance: 2006-12-19 Version No.: 1 Starting Date of GSP 2007-06-06		Final PDD version: Date of issuance: 2008-03-12 Version No.: 4	
Estimated Annual Emission Reduction:		53,425 tons CO2	
Assessment Team Leader: Dr. Sven Kolmetz		Further Assessment Team Members: Cuiyun Zhang Paula Auer	
Summary of the Validation Opinion: ☒ The review of the project design documentation and the subsequent follow-up interviews have provided TÜV SÜD with sufficient evidence to determine the fulfilment of all stated criteria. In our opinion, the project meets all relevant UNFCCC requirements for the CDM. Hence TÜV SÜD will recommend the project for registration by the CDM Executive Board in case letters of approval of all Parties involved will be available before the expiring date of the applied methodology(ies) or the applied methodology version respectively. ☐ The review of the project design documentation and the subsequent follow-up interviews have not provided TÜV SÜD with sufficient evidence to determine the fulfilment of all stated criteria. Hence TÜV SÜD will not recommend the project for registration by the CDM Executive Board and will in- form the project participants and the CDM Executive Board on this decision.

Annex 1: Validation Protocol

Annex 2: Information Reference List

1 INTRODUCTION

1.1 Objective

The validation objective is an independent assessment by a Third Party (Designated Operational Entity = DOE) of a proposed project activity against all defined criteria set for the registration under the Clean Development Mechanism (CDM). Validation is part of the CDM project cycle and will finally result in a conclusion by the executing DOE whether a project activity is valid and should be submitted for registration to the CDM-EB. The ultimate decision on the registration of a proposed project activity rests at the CDM Executive Board and the Parties involved.

The project activity discussed by this validation report has been submitted under the project title:
Guangdong Nan Ao 26MW Wind Power Project

1.2 Scope

The scope of any assessment is defined by the underlying legislation, regulation and guidance given by relevant entities or authorities. In the case of CDM project activities the scope is set by:

- Ø The Kyoto Protocol, in particular § 12
- Ø Decision 2/CMP1 and Decision 3/CMP.1 (Marrakech Accords)
- Ø Further COP/MOP decisions with reference to the CDM (e.g. decisions 4 – 8/CMP.1)
- Ø Decisions by the EB published under <http://cdm.unfccc.int>
- Ø Specific guidance by the EB published under <http://cdm.unfccc.int>
- Ø Guidelines for Completing the Project Design Document (CDM-PDD), and the Proposed New Baseline and Monitoring Methodology (CDM-NM)
- Ø The applied approved methodology
- Ø The technical environment of the project (technical scope)
- Ø Internal and national standards on monitoring and QA/QC
- Ø Technical guideline and information on best practice

The validation is not meant to provide any consulting towards the client. However, stated requests for clarifications and/or corrective actions may provide input for improvement of the project design.

Once TÜV SÜD receives a first PDD version, it is made publicly available on the internet at TÜV SÜD's webpage as well as on the UNFCCC CDM-webpages for starting a 30 day global stakeholder consultation process (GSP). In case of any request a PDD might be revised (under certain conditions the GSP will be repeated) and the final PDD will form the basis for the final evaluation as presented by this report. Information on the first and on the final PDD version is presented at page 1.

The only purpose of a validation is its use during the registration process as part of the CDM project cycle. Hence, TÜV SÜD can not be held liable by any party for decisions made or not made based on the validation opinion, which will go beyond that purpose.

2 METHODOLOGY

The project assessment aims at being a risk based approach and is based on the methodology developed in the Validation and Verification Manual (for further information see www.vvmanual.info), an initiative of Designated and Applicant Entities, which aims to harmonize the approach and quality of all such assessments.

In order to ensure transparency, a validation protocol was customised for the project. TÜV SÜD developed a “cook-book” for methodology-specific checklists and protocol based on the templates presented by the Validation and Verification Manual. The protocol shows, in a transparent manner, criteria (requirements), the discussion of each criterion by the assessment team and the results from validating the identified criteria. The validation protocol serves the following purposes:

- It organises, details and clarifies the requirements a CDM project is expected to meet;
- It ensures a transparent validation process where the validator will document how a particular requirement has been validated and the result of the validation.

The validation protocol consists of three tables. The different columns in these tables are described in the figure below.

The completed validation protocol is enclosed in Annex 1 to this report.

Validation Protocol Table 1: Conformity of Project Activity and PDD				
Checklist Topic / Question	Reference	Comments	PDD in GSP	Final PDD
The checklist is organised in sections following the arrangement of the applied PDD version. Each section is then further subdivided. The lowest level constitutes a checklist question / criterion.	Gives reference to documents where the answer to the checklist question or item is found in case the comment refers to documents other than the PDD.	The section is used to elaborate and discuss the checklist question and/or the conformance to the question. It is further used to explain the conclusions reached. In some cases sub-checklist are applied indicating yes/no decisions on the compliance with the stated criterion. Any Request has to be substantiated within this column	Conclusions are presented based on the assessment of the first PDD version. This is either acceptable based on evidence provided (p), or a Corrective Action Request (CAR) due to non-compliance with the checklist question (See below). Clarification Request (CR) is used when the validation team has identified a need for further clarification.	Conclusions are presented in the same manner based on the assessment of the final PDD version.

As for this specific project the final PDD was applying a different version of the methodology than the first one, a table 1a and a table 1b are presented reflecting the changes by the revision of the methodology.

Validation Protocol Table 2: Resolution of Corrective Action and Clarification Requests			
Clarifications and corrective action requests	Ref. to table 1	Summary of project owner response	Validation team conclusion
<i>If the conclusions from table 1 are either a Corrective Action Request or a Clarification Request, these should be listed in this section.</i>	<i>Reference to the checklist question number in Table 1 where the Corrective Action Request or Clarification Request is explained.</i>	<i>The responses given by the client or other project participants during the communications with the validation team should be summarised in this section.</i>	<i>This section should summarise the validation team's responses and final conclusions. The conclusions should also be included in Table 1, under "Final PDD".</i>

In case of a denial of the project activity more detailed information on this decision will be presented in table 3.

Validation Protocol Table 3: Unresolved Corrective Action and Clarification Requests		
Clarifications and corrective action requests	Id. of CAR/CR 1	Explanation of the Conclusion for Denial
<i>If the final conclusions from table 2 results in a denial the referenced request should be listed in this section.</i>	<i>Identifier of the Request.</i>	<i>This section should present a detail explanation, why the project is finally considered not to be in compliance with a criterion.</i>

2.1 Appointment of the Assessment Team

According to the technical scopes and experiences in the sectoral or national business environment TÜV SÜD has composed a project team in accordance with the appointment rules of the TÜV SÜD certification body “climate and energy”. The composition of an assessment team has to be approved by the Certification Body ensuring that the required skills are covered by the team. The Certification Body TÜV SÜD operates four qualification levels for team members that are assigned by formal appointment rules:

- Ø Assessment Team Leader (ATL)
- Ø Greenhouse Gas Auditor (GHG-A)
- Ø Greenhouse Gas Auditor Trainee (T)
- Ø Experts (E)

It is required that the sectoral scope linked to the methodology has to be covered by the assessment team.

The validation team was consisting of the following experts (the responsible Assessment Team Leader is written in bold letters):

Name	Qualification	Coverage of technical scope	Coverage of sectoral expertise	Host country experience
Dr. Sven Kolmetz	ATL	p	p	p
Cuiyun Zhang	A	p	p	p
Paula Auer	T	p	p	

Dr. Sven Kolmetz is physicist and auditor at the department “TÜV Carbon Management Service” located in the head office of TÜV Süd Industrie Service GmbH in Munich. Furthermore he is officially authorized expert in the verification of GHG emissions in the framework of the European Emission Trading Scheme. Before entering TÜV SÜD he worked as energy consultant for industrial companies and as consultant for the German Federal Government on instruments for the reduction of GHG emissions.

Ms. Cuiyun Zhang is an auditor for environmental management systems (according to ISO 14001) at Jiangsu TUV Product Service Ltd. She is based in Shanghai. In her position she is responsible for the implementation of validation, verification and certifications audits for management systems. She has received training in the CDM validation process and participated already in several CDM project assessments.

Ms. Paula Auer is an environmental engineer and auditor trainee for environmental management systems at the department “TÜV Carbon Management Service” located in the head office of TÜV Süddeutschland in Munich. She has received training in the CDM validation process and participated already in several CDM project assessments and on-site audits.

2.2 Review of Documents

The first PDD version submitted by the client and additional background documents related to the project design and baseline were reviewed as initial step of the validation process. A complete list of all documents and proofs reviewed is attached as annex 2 to this report.

2.3 Follow-up Interviews

On June 20th, 2007 TÜV SÜD performed interviews on-site with project stakeholders to confirm selected information and to resolve issues identified in the first document review. The table below provides a list of all persons interviewed in the context of this on-site visit.

Name	Organisation
Mr. Lin Weiping	China Resources Wind Power Development Co., Ltd
Mr. Lin Shaokun	China Resources Wind Power Development Co., Ltd
Mr. Guan Yisong	Easy Carbon Consultancy Co. Ltd.

2.4 Resolution of Clarification and Corrective Action Requests

The objective of this phase of the validation is to resolve the requests for corrective actions and clarifications and any other outstanding issues which needed to be clarified for TÜV SÜD's positive conclusion on the project design. The Corrective Action Requests and Clarification Requests raised by TÜV SÜD were resolved during communication between the client and TÜV SÜD. To guarantee the transparency of the validation process, the concerns raised and responses that have been given are summarised in chapter 3 below and documented in more detail in the validation protocol in annex 1.

2.5 Internal Quality Control

As final step of a validation the validation report and the protocol have to undergo an internal quality control procedure by the Certification Body "climate and energy", i.e. each report has to be approved either by the head of the certification body or his deputy. In case one of these two persons is part of the assessment team approval can only be given by the other one.

It rests at the decision of TÜV SÜD's Certification Body whether a project will be submitted for re-requesting registration by the EB or not.

3 SUMMARY OF FINDINGS

As informed above all findings are summarized in table 2 of the attached validation protocol.

History of the validation process

A first version of the PDD was submitted to the DOE in December 2006. Based on this documentation, a document review and a fact finding mission in form of an on-site audit was performed in June 2007. Afterwards, the client revised the PDD according to the requests indicated during the assessment work. The final PDD version that was submitted in July 2008 serves as the basis for the final assessment presented herewith. Changes are not considered to be significant with respect to the qualification of the project as a CDM project based on the two main objectives of the CDM, i.e. to achieve a reduction of anthropogenic GHG emissions and to contribute to a sustainable development.

Project description

The following description of the project as per PDD could be verified during the on-site audit:

Guangdong Nan Ao 26MW Wind Power Project uses wind resources for electricity generation through the construction of a wind farm with a total capacity of 23.25MW. The electricity generated from the project will be sold to the Guangdong Provincial Power Grid, an integral part of the Southern China Power Grid. The estimated annual net electricity output is 57,595 MWh and emission reductions of the proposed project are 53,425 tCO₂ e.

Findings

In total the assessment team expressed 3 Clarification Requests and 6 Corrective Action Requests

The inconsistencies between PDD and the situation on-site have been revised and updated. According to that the IRR calculation has been revised. [CAR1, CAR4]

The required parameters have been included into the monitoring plan, as well as a diagram which presents the location of the monitoring equipment. [CAR 5; CR 2].

Regarding the more formal aspects of the proposed project:

- the geographical coordinates
- applying English maps and references
- including project time schedule
- applying correct publishing date of the NDRC values
- correct starting day of the crediting period

[CAR2, CAR3, CAR6, CR1, CR3] these issues have been corrected, defined and/or added in the final version of the PDD.

Hence, the project complies with the requirements.

Baseline calculation

The calculation of the baseline emissions followed the procedures described in the methodology ACM0002 Version 06. The South China Power Grid is considered to be the project boundary.

The operating margin emission factor (EF_{OM}) was determined based on the simple OM method. The ex-ante option was chosen for this calculation. The calculation of the build margin emission factor (EF_{BM}) was based on modified methods agreed by the EB, because plant specific data are not available in China. The emission factor of the thermal power plants was calculated by the proportion of the emissions of coal, gas and oil times the emission factor of the best available coal, gas and oil power plant as defined and published by the Chinese DNA. The new thermal capacity installation that exceeded 20% in the last years, for which data was available, was finally assessed with this factor.

The baseline calculation was based on the published OM/BM calculation process issued by the National Development and Reform Commission (NDRC, China DNA). The values for the EF_{OM} and EF_{BM} are consistent with the values published by the Chinese DNA and are therefore accepted for the calculation of the baseline emissions and the emission reductions.

The value for the combined margin emission factor (EF_{CM}) was determined using the weighted average of the EF_{BM} and EF_{OM} using the default values for the factors as described in the methodology (i.e. 0.75 and 0.25 for wind farms). As per the methodology, the project does not need to consider leakage or project emissions. As a result, the annual emission reductions equal the annual baseline emissions.

In summary, the calculation of the baseline emissions and the emission reductions, respectively, can be considered as correct.

Additionality

The additionality of the project was checked carefully. In doing so the assessment team has put the main focus on the following issues.

The first Feasibility Study Report was issued in March 2002 (IRL 6) and was approved by the Guangdong Development and Reform Commission in Nov 2003.

Due to the wind tariff change for Guangdong Province (issued by Guangdong Provincial Pricing Bureau) in 2004 (IRL 12), the proposed project fell under the benchmark of 8 % and the project was not financial attractive anymore.

The former project developer (Shantou Dannan Wind Energy Co. , Ltd.) of which the biggest shareholder is Nuon in Netherlands, being a none Chinese holding project developer was not eligible to develop CDM and gain CDM revenue under Measures for Operation and Management of Clean Development Mechanism Projects in China issued in 2005. For this reason Shantou Dannan Wind Energy Co. , Ltd quit this project.

Until beginning of 2006 the project was far away from being implemented.

On October 23th 2006 Guangdong Development and Reform Commission approved the changing of the project owner of Guangdong Nan Ao 26MW Wind Power Project (IRL 8).

For that reason, the project starting date can be considered to be April 2007, when the purchasing contract with the turbine manufacturer was signed (see IRL 10).

Prior to that date, the CDM consultancy contract was signed in October 2006 (see IRL 32). The evidence was reviewed and found to consistently proof the projects early CDM consideration.

In step one of the applying the tool for the demonstration and assessment of additionality (hereafter: additionality tool) it is concluded that there exist alternatives to the proposed project activity, the additionality criteria is fulfilled.

Step two of the additionality tool, investment analysis, describes in detail that the proposed project is not financially attractive without CER revenues. The assessment team has checked all sources of

the IRR calculation, as presented in Sub-step 2c. in the PDD. The one source used for the IRR calculation is the "Reassessment report of the investment analysis", dated on Nov. 10th, 2006 (IRL 24).

The O&M costs are below 5% of the total investment, which is reasonable scenario for wind power plants. The grid tariff could be evidenced and expected annual electricity supplied to the grid is based on 19 years wind recording and the expertise of the design institute and is thus considered very reasonable.

Further the calculation spreadsheet and the source of the benchmark was checked and found to be correct. In the calculation spreadsheet as submitted for registration the IRR amounts 6.4%. Although three turbines could not be installed as scheduled and the total investment has been increased significantly in recent years, beside the electricity tariff, the project participant still use the data from the feasibility study report for the IRR calculation (see IRL 6). Obviously, the assumption of higher power generation and lower investment causes a higher IRR result. This assumption can be considered conservative. In the Re-assessment report of the investment analysis the IRR amounts 5.7%, which is also well below the benchmark (see IRL 24). The differences between the IRR results are based on the corrected assumptions regarding total investment costs, electricity tariff and electricity generation.

In the PDD a benchmark of 8% is used. This value is in accordance with Interim Rules on Economic Assessment of Electrical Engineering Retrofit Projects and is applicable for large scale projects in China.

A sensitivity analysis is performed, by taking into account 10% variations in total investment costs, O&M costs, tariff and power output. It is deemed reasonable to use the applied variables, they present well realistic variations of these key parameters. The results of the sensitivity analysis show that a variation in annual O&M costs and total investment have a low impact on the overall IRR whereas the other variables have a high impact. Both a variation in grid tariff (10%+) and power generation (10%+) will lead to an IRR exceeding the benchmark. This two scenarios can however be excluded. The real grid tariff was known by the time of making the investigation (see IRL 12). It is thus concluded this scenario was very unlikely. A variation of 10%+ of net supplied power is also considered a very unlikely scenario due to the 19 years of statistical wind data on which the investigation is based upon. For the time of the crediting period it is not reasonable to assume a net power supply considerably above one derived from this long term average wind speed. To conclude the sensitivity analysis, it can be stated that under the assumed variation of variables the benchmark of 8% is unlikely to be met. We thus conclude the project is financially unattractive without CER revenues.

In step 4, common practice analysis, wind power plants constructed in the South China grid system since 2002 with installed capacities above 15 MW were assessed. The South China grid contains Guangdong Province, Guangxi Province, Guizhou Province and Yunnan Province. It represents a large area with similar investment environment as the geographical boundary. Hence, the auditor team is convinced that the similar projects within South China present a reasonable situation of wind farms in China. As the proposed project is a large scale project, it is reasonable to exclude small scale projects with a capacity of 15MW or below.

In 2002 the electricity production system in China got restructured. The investment situation after 2002 changed completely. For that reason it is appropriate to exclude projects before 2002.

All projects are located in Guangdong province as there is no wind farm project in other provinces of the Southern Grid.

This has been evidenced by Statistics of installed capacity of China's Wind Farms in 2006 by Mr Shi Pengfei, Vice Chairman of Chinese Wind Energy Association. And has additionally been examined by the validation team by checking the websites of Chinese industries operating in the wind sector (wind atlas of China).

According to the Statistic of installed capacity of Chinas Wind farms, there are 8 wind projects with a total capacity of 211.14 MW.

Out of these 8 projects, five are either small scale projects or have been developed before 2002. They have a different investment background. For that reason they cannot be compared with the proposed project.

Two of the 8 projects are developed under the CDM and one had received higher tariffs than the proposed project. This has been checked and verified by the validation team through „Develop the Wind Resource and Promote the Construction of Wind Farm“ by Chen Xuefeng; The Director of Research Department of Gansu Provincial Electric Power Sector Society.

To conclude the additionality assessment we can state that, according to all the documents we have reviewed, we can confirm the additionality of the project based on the available information.

Monitoring

The project applies the approved monitoring methodology ACM0002 version 06 “Consolidated monitoring methodology for zero emissions grid-connected electricity generation from renewable sources”. The selected monitoring methodology is applicable for the project activity as it involves grid-connected renewable power generation using wind power.

In line with the methodology, the only parameter that needs to be monitored ex-post is the net electricity exported to the grid by the project activity. For this case, the electricity supplied to the grid as well as the electricity imported from the grid is measured continuously and recorded monthly.

The meters will be calibrated yearly. The accuracy is 0,5%.

4 COMMENTS BY PARTIES, STAKEHOLDERS AND NGOS

TÜV SÜD published the project documents on UNFCCC website by installing a link to TÜV SÜD's own website and invited comments by Parties, stakeholders and non-governmental organisations during a period of 30 days.

The following table presents all key information on this process:

webpage: http://www.netinform.de/KE/Wegweiser/Guide2_1.aspx?ID=3095&Ebene1_ID=26&Ebene2_ID=951&mode=1

5 VALIDATION OPINION

TÜV SÜD has performed a validation of the following proposed CDM project activity:

Guangdong Nan Ao 26MW Wind Power Project.

The review of the project design documentation and the subsequent follow-up interviews have provided TÜV SÜD with sufficient evidence to determine the fulfilment of stated criteria. In our opinion, the project meets all relevant UNFCCC requirements for the CDM. Hence TÜV SÜD will recommend the project for registration by the CDM Executive Board.

An analysis as provided by the applied methodology demonstrates that the proposed project activity is not a likely baseline scenario. Emission reductions attributable to the project are hence additional to any that would occur in the absence of the project activity. Given that the project is implemented as designed, the project is likely to achieve the estimated amount of emission reductions as specified within the final PDD version.

The validation is based on the information made available to us and the engagement conditions detailed in this report. The validation has been performed using a risk based approach as described above. The only purpose of this report is its use during the registration process as part of the CDM project cycle. Hence, TÜV SÜD can not be held liable by any party for decisions made or not made based on the validation opinion, which will go beyond that purpose.

Annex 1: Validation Protocol

Validation Protocol

Project Title: Guangdong Nan Ao 26MW Wind Power Project

Date of Completion: July 22th, 2008

Number of Pages: 37

Industrie Service

Table 1 Conformity of Project Activity and PDD

CHECKLIST TOPIC / QUESTION		Ref.	COMMENTS	PDD in GSP	Final PDD
A. General description of project activity					
A.1. Title of the project activity					
A.1.1.	Does the used project title clearly enable to identify the unique CDM activity?	1	The project is titled with the name of the project location, the installed capacity and the energy source of the project. Hence, it can be clearly identified.	p	p
A.1.2.	Are there any indication concerning the revision number and the date of the revision?	1	The available PDD for document review and on-site assessment is indicated as first version and completed on Dec. 19 th , 2006.	p	p
A.1.3.	Is this consistent with the time line of the project's history?	1	Yes, it is the first and only one at validator's desk while preparing the protocol. Moreover, the same PDD was published for GSP on June 6 th , 2007.	p	p
A.2. Description of the project activity					
A.2.1.	Is the description delivering a transparent overview of the project activities?	1, 6	The proposed project utilizes wind resources for electricity generation through the installation and operation of 23.25 MW wind farm in Nan Ao Island, Shantou City, Guangdong Province. The generated power will be fed to Guangdong Provincial Power Grid, an integral part of the Southern China Power Grid, to displace the electricity mainly supplied by coal-fired plants. During the on-site audit, the project activities described in the PDD have been proven to be right. <u>Corrective Action Request 1:</u> During the site visiting, the auditor was told that 3 turbines would not be installed due to the local residents' comments. Hence, the installed capacity, the yearly electricity generation, and consequently, the annual GHG emission reduction will be less than the original ones. The related figures in PDD shall be updated accor-	CAR 1	p

Industrie Service

CHECKLIST TOPIC / QUESTION		Ref.	COMMENTS	PDD in GSP	Final PDD
			dingly.		
A.2.2.	What proofs are available demonstrating that the project description is in compliance with the actual situation or planning?	1, 6, 10, 19	The auditor visited the construction site in June and verified the project site with the construction drawings. The following documents reviewed during the on site audit deliver evidences for the project activity: - Purchasing contract of turbine which is countersigned with the manufacturer, Xinjiang Gold Wind Technology Company (750kW each). - Feasibility Study Report (issued on March. 2002 and approved by Development and Reform Commission of Guangdong Province in 2003.) - Environmental Impact Assessment (approved by the EPB of Guangdong on Aug. 13th, 2004)	p	p
A.2.3.	Is the information provided by these proofs consistent with the information provided by the PDD?	1, 14-17	The required data are delivered in the PDD and have been evidenced during the audit. The statistical background has been reviewed with official documentation (China Electric Power Yearbooks 2003-2005, China Energy Statistical Yearbooks 2000-2005 and IPCC 1996).	p	p
A.2.4.	Is all information presented consistent with details provided by further chapters of the PDD?	1	Yes. All the information, including installed capacity, electricity fed to grid, annual emission reduction, in this chapter is consistent to the following chapters and annexes. However, referring to CAR 1, these data needs to be revised.	See CAR 1	p
A.3. Project participants					
A.3.1.	Is the form required for the indication of project participants correctly applied?	1	Yes. The required form is applied correctly.	p	p
A.3.2.	Is the participation of the listed entities or Parties confirmed by each one of them?	1	Till the on site assessment, the project owner has not reached agreement with the investment party.	Open Issue	p

activity belonging to? Is the category correctly identified and indicated?		tified in the PDD.		
A.4.3. Technology to be employed by the project activity				
A.4.3.1. Does the technical design of the project activity reflect current good practices?	1, 10	Introduced by the project owner, 31 wind turbines of 750kW are going to be installed. The supplier is Goldwind Science & Technology Ltd., the biggest Chinese wind turbine manufacture. Such type has been successfully operated at many wind power plants, such as, Guangdong Yuehai Windfarm, Xianjiang Dabancheng Windfarm, among others. There's no doubt that the project activity reflects current good practices.	p	p
A.4.3.2. Does the description of the technology to be applied provide sufficient and transparent input/ information to evaluate its impact on the greenhouse gas balance?	1, 10	Because the project activity comprises the use of wind power for the substitution of grid supplied electricity mainly from coal fired plant, doubtlessly, this technology will reduce GHG emissions significantly.	p	p
A.4.3.3. Does the implementation of the project activity require any technology transfer from annex-I-countries to the host country(ies)?	1, 10	In this case, the advanced domestic-made wind turbines are used, therefore, there's no technology transfer from annex-I-countries to the host country.	p	p
A.4.3.4. Is the technology implemented by the project activity environmentally safe?	1, 10	Being a project utilizing wind resource for electricity generation, it will have only minor environmental impact.	p	p
A.4.3.5. Is the information provided in compliance with actual situation or planning?	1, 10	Yes, the evidence provided by the feasibility report and the turbine purchasing contract delivers the same information as that from the PDD.	p	p
A.4.3.6. Does the project use state of the art technology and / or does the technology result in a significantly better performance than any commonly used technologies in the host country?	1, 10	As introduced by the project owner, the 750 kW turbines manufactured by Goldwind Science & Technology Ltd. represent the state of the art technology in China and has reached the a comparable level to the international big turbine suppliers. Moreover, with the successful implementation at other wind farm sites, both, project owner and manufacturer are confident regarding this mature technology.	p	p

Project Title: Guangdong Nan Ao 26MW Wind Power Project

Date of Completion: July 22th, 2008

Number of Pages: 37

Industrie Service

CHECKLIST TOPIC / QUESTION	Ref.	COMMENTS	PDD in GSP	Final PDD
A.4.3.7. Is the project technology likely to be substituted by other or more efficient technologies within the project period?	1, 10	We do not expect that there will be a substitution because the turbines and the other equipment will be newly commissioned and installed. The life cycle of a wind turbine is under normal circumstances longer than the crediting period.	p	p
A.4.3.8. Does the project require extensive initial training and maintenance efforts in order to be carried out as scheduled during the project period?	1, 11	Allowing for the fact that the wind power plants are still new business, extensive initial training is needed to guarantee safe operation during the life time.	p	p
A.4.3.9. Is information available on the demand and requirements for training and maintenance?	1, 11	According to the contract, the turbine manufacture is responsible for providing training of maintenance and operation. Once the operators are recruited, they will be delegated to other wind farms site for the on site training. During the on site audit, the supplier's training agenda has been reviewed by auditor.	p	p
A.4.3.10. Is a schedule available for the implementation of the project and are there any risks for delays?	1	The planning schedule in the past and for the future was clearly described by Mr. Lin, the project manager, during the interview. Considering the fact that the construction has been kicked off, the risks of delays are low. <u>Corrective Action Request 3:</u> The time schedule of the implementation of the project should be included into the PDD.	CAR 3	p
A.4.4. Estimated amount of emission reductions over the chosen crediting period				
A.4.4.1. Is the form required for the indication of projected emission reductions correctly applied?	1, 2	Yes, the required form is correctly applied. It includes the years in crediting period and estimated annual emission reduction. All the figures are clearly presented in the table.	p	p
A.4.4.2. Are the figures provided consistent with other data presented in the PDD?	1, 2	The figures are quoted throughout the PDD. However, referring to the CAR 1, the installed capacity, annual power generation and the yearly emission reduction shall be updated.	See CAR 1	p
A.4.5. Public funding of the project activity				

Validation Protocol

Project Title: Guangdong Nan Ao 26MW Wind Power Project

Date of Completion: July 22th, 2008

Number of Pages: 37

Industrie Service

CHECKLIST TOPIC / QUESTION	Ref.	COMMENTS	PDD in GSP	Final PDD
A.4.5.1. Is the information provided on public funding provided in compliance with the actual situation or planning as available by the project participants?	1, 6	There's no public funding from Annex I parties. According to the approved feasibility report, project owner's capital and commercial loan from commercial bank shall compose the investment of this project.	p	p
A.4.5.2. Is all information provided consistent with the details given in remaining chapters of the PDD (in particular annex 2)?	1	Yes, the same statements are presented in A.4.5 of and Annex 2 of PDD.	p	p
B. Application of a baseline and monitoring methodology				
B.1. Title and reference of the approved baseline and monitoring methodology				
B.1.1. Are reference number, version number, and title of the baseline and monitoring methodology clearly indicated?	1, 2	The ACM0002 methodology under version 06 issued on May 19 th , 2006 is applied to this project. It is clearly indicated in chapter B.1. of the PDD.	p	p
B.1.2. Is the applied version the most recent one and / or is this version still applicable?	1, 2	The 6 th version of ACM002 is the latest one at time of starting with the validation.	p	p
B.2. Justification of the choice of the methodology and why it is applicable to the project activity				
B.2.1. Is the applied methodology considered the most appropriate one?	1, 2	The project activity fulfills the criteria of ACM0002: - utilization of wind sources; - not involving switching from fossil fuels to renewable energy at project site; - the geographic and system boundaries of Southern China Grid can be clearly identified and the information of this grid is available. Thus, the baseline methodology is the most applicable for this project among the existing approved baseline methodologies.	p	p

existing facilities: Is data available to determine the historic production level?			applicable.		
B.4.3.	In case of any modification or retrofit of existing facilities: Have conservative assumptions been applied in order to estimate the point in time when the existing equipment needs to be replaced?	1, 2	There's no modification of an existing facility, so this section is not applicable.	p	p
B.5. Description of how the anthropogenic emissions of GHG by sources are reduced below those that would have occurred in the absence of the registered CDM project activity (assessment and demonstration of additionality):					
B.5.1.	Is evidence provided, that CDM has been considered seriously in the decision to proceed with the project activity?	1, 3	Although the feasibility study report was developed in 2002 and approved by the government in 2003, due to the poor financial indicators and cap tariff policy issued by the Price Bureau afterwards, there's no further action to start the project. Moreover, in 2005, with the releasing of <i>Measures for Operation and Management of Clean Development Mechanism Projects in China</i> , it becomes ineligible for NUON, an overseas company, to get the approval of developing the proposed project to be CDM one. Hence, in 2006, considering the CDM revenue, China Resources Wind Power (Shantou) Co., Ltd, a Chinese company, bought the proposed project. Right after getting the approval of changing the project owner, the investment was re-assessed by the organization which prepared the feasibility study report and a consulting company was chosen to support the CDM application work. The financial analysis report issued in November of 2006 and the CDM consulting contract undersigned in October of 2006 have been reviewed by the auditor. In April of 2007, the purchasing contract of wind turbines were countersigned with the supplier and 2 months later, the construction launched.	p	p

Validation Protocol

Project Title: Guangdong Nan Ao 26MW Wind Power Project

Date of Completion: July 22th, 2008

Number of Pages: 37

Industrie Service

CHECKLIST TOPIC / QUESTION	Ref.	COMMENTS	PDD in GSP	Final PDD
B.5.2. Have realistic and credible alternatives been identified providing comparable outputs or services? (step 1a)	1, 3	The following baseline scenarios are discussed: - Business as usual (grid electricity supply from the Southern China Grid) - Installation of a coal-fired power plant with similar capacity - Installation of another renewable power plant with similar capacity - The project itself without consideration of the CDM These scenarios are the only ones that are making sense.	p	p
B.5.3. Is the project activity without CDM included in these alternatives? (step 1a)	1, 3	Yes, the activity without CDM is considered as an alternative scenario.	p	p
B.5.4. Is a discussion provided for all identified alternatives concerning the compliance with applicable laws and regulations? (step 1b)	1, 3	The relative regulations and laws are clearly discussed for each scenario one by one in the PDD. According to Chinese power regulations, construction of a coal-fired power plant of less than 135 MW are prohibited in the areas covered by large grids, hence the alternative of installation of a coal-fired power plant with similar capacity is not a realistic and credible alternative.	p	p
B.5.5. In case the PDD argues that specific laws are not enforced in the country or region: Is evidence available concerning that statement? (step 1b)	1, 3	All the laws quoted in the PDD are enforced in this project; hence, this section is not applicable.	p	p
B.5.6. In case of applying step 2 / investment analysis of the additionality tool: Is the analysis method identified appropriately (step 2a)?	1, 3, 13	3 analysis methods are provided according to the additionality tool (version 3). Because the proposed project generates economic benefits through the sales of electricity other than CDM revenue, therefore, the Option I (simple cost analysis) can't be taken. Moreover, the Option II (investment comparison analysis) only applies to projects where the alternative should be similar investment projects, however, in this case, the baseline scenario is Southern China Grid; hence, Option II can't be adopted either.	p	p

CHECKLIST TOPIC / QUESTION		Ref.	COMMENTS	PDD in GSP	Final PDD
			Option III (benchmark analysis) is the only applicable one.		
B.5.7.	In case of Option I (simple cost analysis): Is it demonstrated that the activity produces no economic benefits other than CDM income?	1, 3	As described above, Option III is chosen for the investment analysis. So this section is not applicable.	p	p
B.5.8.	In case of Option II (investment comparison analysis): Is the most suitable financial indicator clearly identified (IRR, NPV, cost benefit ratio, or (levelized) unit cost)?	1, 3	As described above, Option III is chosen for the investment analysis. This section is not applicable.	p	p
B.5.9.	In case of Option III (benchmark analysis): Is the most suitable financial indicator clearly identified (IRR, NPV, cost benefit ratio, or (levelized) unit cost)?	1, 3, 6, 18, 24, 25, 26	The IRR results with / without CDM revenue are clearly demonstrated in Table 1 of the PDD. The spreadsheet in English has been verified by the auditor on site. Most data used for calculation are given by the approved feasibility report. <u>Corrective Action Request 4:</u> - Referring to CAR 1, the annual power generation needs to be revised, hence, the IRR calculation shall also be updated; - Pls. deliver the data source of the fixed assets salvage recovery, liquid assets recovery, Fixed asset investment, depreciation and amortization to audit team for assessment; - The unit shall be added into the spreadsheet.	CAR 4	p
B.5.10.	In case of Option II or Option III: Is the calculation of financial figures for this indicator correctly done for all alternatives and the project activity?	1, 3, 6, 18, 24, 25, 26	Referring to CAR 4, the spreadsheet needs to be updated and published. Whereas, the audit team has verified the calculation process and quoted data under the scenario of the project activity without CDM revenue and the project itself.	See CAR 4	p

CHECKLIST TOPIC / QUESTION	Ref.	COMMENTS	PDD in GSP	Final PDD
larities the project activity would not be implemented without the CDM component (step 4b)?			CR 1	
B.5.17. Is it appropriately explained how the approval of the project activity will help to overcome the economic and financial hurdles or other identified barriers (step 5)?	1	The CDM registration will help to overcome the financial risks.	p	p
B.6. Emissions reductions				
<i>B.6.1. Explanation of methodological choices</i>				
B.6.1.1. Is it explained how the procedures provided in the methodology are applied by the proposed project activity?	1, 2	The ex-ante approach is chosen for the baseline emission calculation.	p	p
B.6.1.2. Is every selection of options offered by the methodology correctly justified and is this justification in line with the situation verified on-site?	1, 2, 14-17	Yes, the justification has been fully discussed and demonstrated in the PDD based on the options provided from the latest methodology. All the data are referring to the latest available data when the PDD was prepared and public for the global stakeholder process, such as, Chinese Electric Power Yearbook (2003-2005), the China Energy Statistical Yearbook (2000-2005).	p	p
B.6.1.3. Are the formulae required for the determination of project emissions correctly presented, enabling a complete identification of parameter to be used and / or monitored?	1, 2, 14-17	According to the methodology, the project participants need not to consider the project emissions.	p	p
B.6.1.4. Are the formulae required for the determination of baseline emissions correctly presented, enabling a complete identification of parameter to be used and / or monitored?	1, 2, 14-17	All the formulae used are in compliance with the one in the defined methodology version 06.	p	p

Validation Protocol

Project Title: Guangdong Nan Ao 26MW Wind Power Project

Date of Completion: July 22th, 2008

Number of Pages: 37

Industrie Service

CHECKLIST TOPIC / QUESTION	Ref.	COMMENTS	PDD in GSP	Final PDD
B.6.1.5. Is the choice of options to determine the emissions factor (OM, BM) justified in a suitable and transparent manner?	1, 2, 14-17	The justification is demonstrated in the PDD. Referring to the data from the China Electric Yearbook, the Simple OM seems to be the only approach for the OM calculation. Moreover, the approved deviation is implemented for the BM estimation. All the relative evidence is verified by the auditor on site.	p	p
B.6.1.6. In case of alternative weighing factors for the Combined Margin: Is the quantification of the alternative weighing factor justified in a suitable and transparent manner?	1, 2, 14-17	The default weights for wind farm project ($W_{OM}=0.75$; $W_{BM}=0.25$) defined in methodology (06 ver.) are used.	p	p
B.6.1.7. In case of alternative weighing factors for the Combined Margin: Is the guidance for the PDD concerning the acceptability of alternative weights considered in the discussion?	1, 2, 14-17	See B.6.1.6. of protocol.	p	p
B.6.1.8. Are the formulae required for the determination of leakage emissions correctly presented, enabling a complete identification of parameter to be used and / or monitored?	1, 2, 14-17	According to the methodology, consideration of leakages is not required.	p	p
B.6.1.9. Are formulae required for the determination of emission reductions correctly presented?	1, 2, 14-17	Yes. The formulae in the PDD are clearly presented for the determination of the emission reduction. As the project emission and leakages are both zero, the emission reduction is equal to the baseline emission.	p	p
B.6.2. Data and parameters that are available at validation				
B.6.2.1. Is the list of parameters presented in chapter B.6.2 considered to be complete with regard to the requirements of the applied methodology?	1, 2, 14-17	All the parameters used for emission reduction calculation are verified by the audit team on site. However, in section B.6.2. of the PDD, some indicators are missing. <u>Corrective Action Request 5:</u>	CAR-5	p

		Correct value provided?	Yes		
		Has this value been verified?	Yes		
		Choice of data correctly justified?	Yes		
		Measurement method correctly described?	Yes		
B.6.3. Ex-ante calculation of emission reductions					
B.6.3.1. Is the projection based on the same procedures as used for future monitoring?	1, 2, 14	Yes, the emission reduction is determined by deducting the project emission and leakage from baseline emission. The same formulae are also the basic for the future monitoring.		p	p
B.6.3.2. Are the GHG calculations documented in a complete and transparent manner?	1, 2, 14	Double checked with Annex 3 of the PDD, the formulae and data are adopted in a complete and transparent manner. The OM, BM published by NDRC (China DNA) are quoted in the PDD.		p	p

CHECKLIST TOPIC / QUESTION	Ref.	COMMENTS	PDD in GSP	Final PDD
B.6.3.3. Is the data provided in this section consistent with data as presented in other chapters of the PDD?	1, 2, 14	The data in this section are consistent with those in other chapters of the PDD.	p	p
B.6.4. Summary of the ex-ante estimation of emission reductions				
B.6.4.1. Will the project result in fewer GHG emissions than the baseline scenario?	1, 2, 14	Demonstrated in the PDD, being a wind farm project, the GHG emission reduction is equivalent to the baseline emissions.	p	p
B.6.4.2. Is the form/table required for the indication of projected emission reductions correctly applied?	1, 2, 14	Yes, the required form is used which includes the emission of project activity, leakage, baseline emission and estimated overall emission reduction.	p	p
B.6.4.3. Is the projection in line with the envisioned time schedule for the project's implementation and the indicated crediting period?	1, 2, 14	The life time of the project is expected to be 20 years and the renewable crediting period of max 7 years with potential for 2 renewals is chosen. Therefore, the yearly emission reduction and total emission reduction indicated in table B.6.4. in the PDD are correct.	p	p
B.6.4.4. Is the data provided in this section in consistency with data as presented in other chapters of the PDD?	1, 2, 14	Yes, the results are same to the ones in A.4.4, but more concrete processes are given.	p	p
B.7. Application of the monitoring methodology and description of the monitoring plan				
B.7.1. Data and parameters monitored				
B.7.1.1. Is the list of parameters presented by chapter B.7.1 considered to be complete with regard to the requirements of the applied methodology?	1, 2	Because the ex-ante approach is adopted, the net electricity fed to the grid is required to be monitored. The parameter has been included in table B.7.1 in the PDD.	p	p
Integrate the required amount of sub-checklists for monitoring parameter and comment on any line answered with "No"				
B.7.1.2. Parameter Title: Electricity supplied to the grid	1, 2	Monitoring Checklist	GR-2	p
		Title in line with methodology?		
		Yes / No		
		Yes

CHECKLIST TOPIC / QUESTION	Ref.	COMMENTS		PDD in GSP	Final PDD
		QA/QC procedures described?	N.A.		
		QA/QC procedures appropriate?	N.A.		
		This parameter needs not be considered, because the activity is a wind farm project.			
B.7.2. Description of the monitoring plan					
B.7.2.1. Is the operational and management structure clearly described and in compliance with the envisioned situation?	1	A CDM group is going to be established to carry out the monitoring work. Though the detailed management procedures will be defined when the project is in operation, the monitoring management structure is outlined in PDD: The Operation manager of windfarm will collect the data of each day. On the monthly basis, the documented data will be sent to CDM manager and responsible staff of China Resources Wind Power (Shantou) Co., Ltd.. The CDM manager will in charge of the implementation of the Monitoring Plan and report to the General Manager of the company. The General Manager of the company will make the confirmations on monitoring, calculation data and reports.		p	p
B.7.2.2. Are responsibilities and institutional arrangements for data collection and archiving clearly provided?	1	The management structure for the monitoring of the electricity fed to the grid is clearly presented in the PDD. However, refer to CR 2, a diagram shall be given in PDD.		See CR-2	p
B.7.2.3. Does the monitoring plan provide current good monitoring practice?	1	Pls. see CR 2.		See CR-2	p
B.7.2.4. If applicable: Does annex 4 provide useful information enabling a better understanding of the envisioned monitoring provisions?	1	Not applicable.		p	p

CHECKLIST TOPIC / QUESTION		Ref.	COMMENTS	PDD in GSP	Final PDD
B.8. Date of completion of the application of the baseline study and monitoring methodology an the name of the responsible person(s)/entity(ies)					
B.8.1.	Is there any indication of a date when the baseline was determined?	1	The baseline is determined on Dec. 10 th , 2006. <u>Clarification Request 3:</u> The OM and BM figures published by NDRC is used, however, they are published on Dec. 15 th , 2006. Pls. deliver an explanation to audit team for this illogicality.	CR-3	p
B.8.2.	Is this consistent with the time line of the PDD history?	1	Yes. The PDD is prepared with the latest available data at the time of writing (China Electric Power Yearbook 2003-2005, China Energy Statistical Yearbook 2000-2005 as well as IPCC 1996).	p	p
B.8.3.	Is the information on the person(s) / entity(ies) responsible for the application of the baseline and monitoring methodology provided consistent with the actual situation?	1	Yes. The responsible persons indicated in the PDD are also the ones being interviewed for baseline verification during the on site audit.	p	p
B.8.4.	Is information provided whether this person / entity is also considered a project participant?	1	Easy Carbon Consultancy Co., Ltd. is the CDM developer, not the project participant.	p	p
C. Duration of the project activity / crediting period					
C.1. Duration of the project activity					
C.1.1.	Are the project's starting date and operational lifetime clearly defined and reasonable?	1	The construction was launched in June, 2007 with the consideration of CDM revenue. Including one-year-operation, the lifetime is expected to be 21 years. <u>Corrective Action Request 6:</u> Pls. revise the starting date of the project activity with the launch	p	p

			date of the construction.		
C.2. Choice of the crediting period and related information					
C.2.1.	Is the assumed crediting time clearly defined and reasonable (renewable crediting period of max 7 years with potential for 2 renewals or fixed crediting period of max. 10 years)?	1	The life time of the project is 21 years. Confirming with the provided evidence, such as purchasing contract, business plan, etc. the validator has the confidence that it's reasonable. Therefore, the period of max. 7 years with potential for 2 renewals is chosen as the crediting period.	p	p
D. Environmental impacts					
D.1. Documentation on the analysis of the environmental impacts, including transboundary impacts					
D.1.1.	Has the analysis of the environmental impacts of the project activity been sufficiently described?	1, 19, 20	Yes, the environmental impacts of the project activity such as noise, impact on natural environment, the electromagnetic, migrating birds and water usage have been clearly described.	p	p
D.1.2.	Are there any Host Party requirements for an Environmental Impact Assessment (EIA), and if yes, has an EIA been approved?	1, 19, 20	Yes, an EIA is a must in P. R. China for new wind farm projects. The EIA survey was carried out by the authorized organization and issued on July 21 st , 2004. The EIA was approved by the EPB of Xinjiang on Aug. 13 th , 2004. The documents have been reviewed by the DOE.	p	p
D.1.3.	Will the project create any adverse environmental effects?	1, 19, 20	Referred to the EIA and the approval of EIA, the project will create no negative environmental impacts.	p	p
D.1.4.	Were transboundary environmental impacts identified in the analysis?	1, 19, 20	The proposed wind farm is located within China; hence, this section is not applicable.	p	p

CHECKLIST TOPIC / QUESTION		Ref.	COMMENTS	PDD in GSP	Final PDD
D.2. If environmental impacts are considered significant by the project participants or the host Party, please provide conclusions and all references to support documentation of an environmental impact assessment undertaken in accordance with the procedures as required by the host Party					
D.2.1.	Have the identified environmental impacts been addressed in the project design sufficiently?	1, 19, 20	Referred to the EIA and the approval of EIA, the impacts on the environment are not significant.	p	p
D.2.2.	Does the project comply with environmental legislation in the host country?	1, 19, 20	Yes, it is.	p	p
E. Stakeholders' comments					
E.1. Brief description how comments by local stakeholders have been invited and compiled					
E.1.1.	Have relevant stakeholders been consulted?	1, 21-23	Yes, the relevant stakeholders have been consulted by distributing the questionnaire to the local residents house by house by the project owner. During house visiting, the local residents and related government officers got an overview of the project activity, the environmental impacts and the CDM scheme by the owner's oral introduction. 50 copies of the questionnaire were distributed and 48 pieces are received. Moreover, the project activity was introduced via local newspaper for inviting the comments to the proposed project. No negative comments were given from the respondents as introduced by the power owner.	p	p
E.1.2.	Have appropriate media been used to invite comments by local stakeholders?	1, 21-23	The questionnaire was distributed by the visiting house to house and for informing all the possible stakeholder, a bulletin was pasted to the local newspaper. This is considered to be the most appropriate method to invite stakeholders' comments.	p	p
E.1.3.	If a stakeholder consultation process is	1,	There are no regulations/laws in China for carrying out the stake-	p	p

	required by regulations/laws in the host country, has the stakeholder consultation process been carried out in accordance with such regulations/laws?	21-23	holder consultation process for this project activity.		
E.1.4.	Is the undertaken stakeholder process that was carried out described in a complete and transparent manner?	1, 21-23	Yes, the PDD describes the results of the survey very detailed by providing the percentage answers of each question and the respective possible answers. Also a brief summary of the findings is presented and the conclusion of how due account of the comments received will be taken care of is presented in chapter E.3 in the PDD.	p	p
E.2. Summary of the comments received					
E.2.1.	Is a summary of the stakeholder comments received provided?	1, 21-23	Pls. kindly see E.1.4. of protocol.	p	p
E.3. Report on how due account was taken of any comments received					
E.3.1.	Has due account been taken of any stakeholder comments received?	1, 21-23	Referring to the PDD and filled questionnaires which were gathered from participants and reviewed by the validator on site, all stakeholder comments are positive.	p	p
F. Annexes 1 - 4					
Annex 1: Contact Information					
F.1.1.	Is the information provided consistent with the one given under section A.3?	1	Pls. refer to the Open Issue.	Open Issue	p
F.1.2.	Is the information on all private participants and directly involved Parties presented?	1	Pls. refer to the Open Issue.	Open Issue	p

CHECKLIST TOPIC / QUESTION		Ref.	COMMENTS	PDD in GSP	Final PDD
Annex 2: Information regarding public funding					
F.1.3.	Is the information provided on the inclusion of public funding (if any) in consistency with the actual situation presented by the project participants?	1	Yes. Please see A.4.5.1 of protocol.	p	p
F.1.4.	If necessary: Is an affirmation available that any such funding from Annex-I-countries does not result in a diversion of ODA?	1	Not applicable.	p	p
Annex 3: Baseline information					
F.1.5.	If additional background information on baseline data is provided: Is this information consistent with data presented by other sections of the PDD?	1	All the data source and applied formulae are completely demonstrated in Chapter B of the PDD, hence, there's no additional background information provided in Annex 3. During the on site assessment, the process has been completely verified by the auditor.	p	p
F.1.6.	Is the data provided verifiable? Has sufficient evidence been provided to the validation team?	1	Yes. The detailed calculation processes and related data source have been given to audit team for verification.	p	p
F.1.7.	Does the additional information substantiate / support statements given in other sections of the PDD?	1	The information from Annex 3 is consistent with the statements given in other sections of the PDD.	p	p
Annex 4: Monitoring information					
F.1.8.	If additional background information on monitoring is provided: Is this information consistent with data presented in other sections of the PDD?	1	Section B.7.2 provides sufficient information, besides the issue raised at CR 2. there's no additional information given in Annex 4.	See CR-2	p

Table 2 Resolution of Corrective Action and Clarification Requests

Clarifications and corrective action requests by validation team	Ref. to table 1	Summary of project owner response	Validation team conclusion
The proposed project utilizes wind resources for electricity generation through the installation and operation of 23.25 MW wind farm in Nan Ao Island, Shantou City, Guangdong Province. The generated power will be fed to Guangdong Provincial Power Grid, an integral part of the Southern China Power Grid, to displace the electricity mainly supplied by coal-fired plants. During the on-site audit, the project activities described in the PDD have been proven to be right. <u>Corrective Action Request 1:</u> During the site visiting, the auditor was told that 3 turbines would not be installed due to the local residents' comments. Hence, the installed capacity, the yearly electricity generation, and consequently, the annual GHG emission reduction will be less than the original ones. The related figures in PDD shall be updated accordingly.	A.2.1.	<u>Project Proponent's first Response:</u> Those data mentioned have been updated accordingly. Pls. refer to the revised PDD.	þ The installed capacity has been revised to 23.25 MW, consequently, the yearly electricity generation and the annual GHG emission reduction have been changed to 57,595MWh and 53,425 tCO2 respectively.

Validation Protocol

Project Title: Guangdong Nan Ao 26MW Wind Power Project

Number of Pages: 37

Industrie Service

The proposed project is located at Nan Ao Island, Shantou City, Guangdong Province. <u>Corrective Action Request 2:</u> - The geographical coordinates of project site, not the island shall be given in the PDD. - For the purpose of better understanding by all the reviewers over the global, English maps shall be used in PDD.	A.4.1.1.	<u>Project Proponent's first Response:</u> The geographical coordinates of the project site have been given. Pls. refer to the revised PDD (Section: A4.1.4). <u>Project Proponent's first Response:</u> English maps have been provided. Pls. refer to the revised PDD (Section: A 4.1.4).	þ The English maps and the precise geographical coordinates have been presented in the revised PDD. The related evidence has been reviewed by the audit team.
The planning schedule in the past and for the future was clearly described by Mr. Lin, the project manager, during the interview. Considering the fact that the construction has been kicked off, the risks of delays are low. <u>Corrective Action Request 3:</u> The time schedule of the implementation of the project should be included into the PDD.	A.4.3.10.	<u>Project Proponent's first Response:</u> The information has been added, Pls. refer to the revised PDD (Section: A4.4 and Section C).	þ The date of milestones of implementing the project has been demonstrated at footer 1 of PDD. The date of countersigning the purchasing contract of wind turbines has been presented in Chapter C.1.1 as the earliest date of starting the project, which is consistent with the project history.

Industrie Service

The IRR results with / without CDM revenue are clearly demonstrated in Table 1 of the PDD. The spreadsheet in English has been verified by the auditor on site. Most data used for calculation are given by the approved feasibility report. <u>Corrective Action Request 4:</u> - Referring to CAR 1, the annual power generation needs to be revised, hence, the IRR calculation shall also be updated; - Pls. deliver the data source of the fixed assets salvage recovery, liquid assets recovery, Fixed asset investment, depreciation and amortization to audit team for assessment; - The unit shall be added into the spreadsheet.	B.5.10.	<u>Project Proponent's first Response:</u> The revised spreadsheet is delivered. With 3 turbines are not installed, the operation cost is reduced. In order to find out the influence caused by the variations to the financial analysis, Guangdong Provincial Investigation, Design and Research Institute of Water Conservancy and Electric Power, PRC, which is the design unit of the FSR issued an official auditing letter to reevaluate and prove the financial status on 10th November 2006. The auditing letter has been translated and provided to DOE.	p Although three turbines could not be installed as scheduled and the total investment has been increased significantly in recent years, beside the electricity tariff, the project participant still use the data from the feasibility study report (issued in 2002) for the IRR calculation. Obviously, the assumption of higher power generation and lower investment causes a higher IRR result, in other words, more conservative. A re-assessment was carried out in November of 2006 (five months before launching the project), the IRR is only 5.7% which is even lower than the one in PDD. Regarding the electricity tariff, according to the price policy of Guangdong Province issued in 2004, the price of electricity supplied from wind farm in Guangdong shall be 0.528RMB/kWh from then on. Considering the time schedule of project activity, the auditor think it's reasonable of using 0.582RMB/kWh for the IRR calculation.

All the parameters used for emission reduction calculation are verified by the audit team on site. However, in section B.6.2. of the PDD, some indicators are missing. <u>Corrective Action Request 5:</u> Please refer to the B.6.2.3 - B.6.2.13 of the protocol, the mentioned indicators shall be included into the PDD to increase transparency. The data and related sources have been assessed on site.	B.6.2.1.	<u>Project Proponent's first Response:</u> Have been added into the revised PDD. (Section: B.6.2)	þ The required parameters have been added into the revised PDD.
The construction was launched in June, 2007 with the consideration of CDM revenue. Including one-year-operation, the lifetime is expected to be 21 years. <u>Corrective Action Request 6:</u> Pls. revise the starting date of the project activity with the launch date of the construction.	C.1.1.	<u>Project Proponent's first Response:</u> Have revised; Pls. refer to the PDD (Section C).	þ The date of countersigning the purchasing contract of wind turbines have been presented in the Chapter C.1.1..
According to the official data source: The Statistics on the Installed Capacity of Wind Farms in China 2006, the common and difference between the proposed project and other projects are fully discussed in Step 4. The related report has been reviewed by auditor and verified at Nan Ao Island. However, <u>Clarification Request 1:</u> Since the report is in Chinese, for better understanding by all reviewers, pls. list all the existing projects in Guangdong Province into the PDD.	B.5.16.	<u>Project Proponent's first Response:</u> This Part has been totally updated according to the statistics on the <i>Installed Capacity of Wind Farm in China 2006</i>, and those existing projects that compared with the proposed project have been listed in the PDD. Pls. see Section: B5 Step 4.	þ The <i>Installed Capacity of Wind Farm in China</i> (2006 version) is one of the latest official statistics reports and present the current status of wind farms over China. The projects listed in the PDD have been verified with the report by audit team.

<u>Clarification Request 2:</u> - Confirmed with the project owner, the accuracy of meters is 0.5, not 0.2, pls. correct. - A picture of the monitoring system should be clearly demonstrated, hence, a diagram of monitoring points should be added into the PDD to indicate where the meters are.	B.7.1.2.	<u>Project Proponent's first Response:</u> The problems mentioned have been revised, pls. refer to the PDD.(Section:B7.1.2 and B 7.2)	p The accuracy of electricity meters has been changed to 0.5 and the diagram which presents the locations of monitoring instruments has been added into the PDD.
The baseline is determined on Dec. 10 th , 2006. <u>Clarification Request 3:</u> The OM and BM figures published by NDRC is used, however, they are published on Dec. 15 th , 2006. Pls. deliver an explanation to audit team for this illogicality.	B.8.1.	<u>Project Proponent's first Response:</u> It's a typo mistake, sorry for that. In addition, the OM and BM figures used in the PDD have been revised according to the newly data published by NDRC on 9 th August 2007. Therefore, the baseline is determined on 19 th October2007.Pls refer to the PDD.(Section: B8)	p The date of determining the baseline has been updated. Furthermore, the latest OM and BM figures using the latest data quoted from the published statistics yearbooks 2006 have been used for the calculation of emission factor.
