This document reports the emission reductions generated by Qingdao Longxin Wind Power Project Phase I (hereafter referred to as the Project) which has been registered successfully as a CDM project on September 28<sup>th</sup>, 2012 with registration number of 6697. However, on November 8<sup>th</sup>, 2011, the project had partially commenced with real, quantifiable, additional and permanent emissions reductions which can be considered as Voluntary Carbon Units (VCUs) under the Voluntary Carbon Standard (VCS version 3) after being verified.

The Project Descriptions according to VCS criteria are provided below:

## 1 PROJECT DETAILS

### 1.2 Sectoral Scope and Project Type

This category of the Project would fall within sectoral scope 1: energy industries (Renewable sources).

The type of the Project is a wind power generation project.

The Project is not a Grouped project.

### 1.3 Project Proponent

China Resources Wind Power (Qingdao) Co., Ltd.

|                  |                                                |
|------------------|------------------------------------------------|
| Organization:    | China Resources Wind Power (Qingdao) Co., Ltd. |
| Street/P.O.Box:  | No.5002, Shennan Dong Road Luohu District      |
| City:            | Shenzhen                                       |
| Telephone:       | +86-755-36808782                               |
| FAX:             | +86-755-36808728                               |
| URL:             |                                                |
| Represented by:  | Lin Weiping                                    |
| Title:           |                                                |
| Personal E-Mail: | linweiping@windpowerchina.com                  |

Project proponent, as the project owner, is mainly responsible for the construction and operation of the project, as well as later monitoring, GHG emission reductions calculating and carbon trading.

### 1.5 Project Start Date

Commissioning start date: 08/11/2011

On 08/11/2011, the project had partially commenced with real, quantifiable, additional and permanent emissions reductions which can be considered as Voluntary Carbon Units (VCUs) under the Voluntary Carbon Standard (VCS version 3) after being verified. So the start date of the Project is 08/11/2011.

## 1.6 Project Crediting Period

Project start date: 08/11/2011 on which the project activity began reducing or removing GHG emission. And the Project has been registered successfully as a CDM project on 28/09/2012. That is, the period from 08/11/2011 to 27/09/2012 is considered as the Project crediting period.

## 1.7 Project Scale and Estimated GHG Emission Reductions or Removals

The total installed capacity of the Project is 49.8MW. It is expected that the project activity will generate emission reductions for 92,183tCO<sub>2</sub>e annually in the registered CDM-PDD, which is less than 300,000 tCO<sub>2</sub>e per year. Therefore, the project is categorized as “project” by size according to Voluntary Carbon Standard (VCS version 3).

|               |     |
|---------------|-----|
| Project       | Yes |
| Large project | No  |

| Years                                  | Estimated GHG emission reductions or removals (tCO <sub>2</sub> e) |
|----------------------------------------|--------------------------------------------------------------------|
| 28/09/2012-27/09/2013                  | 92,183                                                             |
| 28/09/2013-27/09/2014                  | 92,183                                                             |
| 28/09/2014-27/09/2015                  | 92,183                                                             |
| 28/09/2015-27/09/2016                  | 92,183                                                             |
| 28/09/2016-27/09/2017                  | 92,183                                                             |
| 28/09/2017-27/09/2018                  | 92,183                                                             |
| 28/09/2018-27/09/2019                  | 92,183                                                             |
| <b>Total estimated ERs</b>             | <b>645,281</b>                                                     |
| <b>Total number of crediting years</b> | <b>7</b>                                                           |
| <b>Average annual ERs</b>              | <b>92,183</b>                                                      |

## 1.9 Project Location

The Project is located at Liyuan Town and Dianzi Town, Pingdu City, Shandong Province, P.R. China. The nearest Liyuan Town is about 10 kilometers from the project site. The geographical coordinates of the project is from 119.8827°E~119.9503°E and from 36.8157°N~37.8915°N (The central GPS coordinate is 119.91125°E, 36.8568°N).

## 1.10 Conditions Prior to Project Initiation

Electricity delivered to the grid by the project activity would have otherwise been generated by the operation of grid-connected power plants and by the addition of new generation sources, as

reflected in the combined margin (CM) calculation described in the “Tool to calculate the emission factor for an electricity system”.

The Project is a renewable energy generation project, which discharges no emission during operation period. Thus, the project doesn't fall into categories that creating GHG emissions primarily for the purpose of its subsequent removal or destruction.

## 1.12 Ownership and Other Programs

### 1.12.1 Right of Use

The business license of China Resources Wind Power (Qingdao) Co., Ltd.

The FSR approval letter of the Project

The EIA approval letter of the Project

The equipment contracts of the Project

The construction contracts of the Project

The China's LOA of the Project

Hereby, confirmed that, the China Resources Wind Power (Qingdao) Co., Ltd. will only sell the VCUs once.

### 1.12.2 Emissions Trading Programs and Other Binding Limits

Qingdao Longxin Wind Power Project Phase I has been registered as a CDM project on 28/09/2012, for which a renewable crediting period of 3×7 years will be used under the CDM GHG Program. Therefore, CO<sub>2</sub> emission reductions generated by the Project during the CDM crediting period will be verified as unique CERs but not VCUs to avoid double counting. As to the project under VCS (Version 3), only emission reductions achieved from 08/11/2011 to 27/09/2012 will be considered as VCUS, which will be sold only once to one particular buyer.

### 1.12.3 Participation under Other GHG Programs

The Project has been registered as a CDM project with registration number 6697 and has not been participated under other GHG programs.

### 1.12.4 Other Forms of Environmental Credit

The Project has not created another form of environmental credit, which will be verified by DOE. And The Project will not create other environmental credit in the future.

## 1.13 Additional Information Relevant to the Project

### Eligibility Criteria

No applicable

## Leakage Management

According to ACM0002 (version 12.2.0), no leakage is considered. The main emissions potentially giving rise to leakage are neglected.

## Commercially Sensitive Information

No applicable.

## Further Information

The annual emission reductions are 92,183tCO<sub>2</sub>e in the first crediting period. Key information and data used to calculate the emission reduction of the Project is described as follow:

Table 1. key information and data used to calculate emission reduction

| Variable                                                                      | Value/Unit                    | Original Data Source                                                                                    |
|-------------------------------------------------------------------------------|-------------------------------|---------------------------------------------------------------------------------------------------------|
| EF <sub>OM,y</sub>                                                            | 0.9914 tCO <sub>2</sub> e/MWh | Calculated from China Electric Power Yearbook 2007-2009 and China Energy Statistical Yearbook 2007-2009 |
| EF <sub>BM,y</sub>                                                            | 0.7495tCO <sub>2</sub> e/MWh  | Calculated from China Electric Power Yearbook 2007-2009 and China Energy Statistical Yearbook 2009      |
| EF <sub>CM,y</sub>                                                            | 0.9309 tCO <sub>2</sub> e/MWh | Calculated from China Electric Power Yearbook 2007-2009 and China Energy Statistical Yearbook 2007-2009 |
| Net electricity supplied by the Project to the North China Power Grid (NCPG). | 99,026MWh                     | FSR                                                                                                     |
