## Summary:

The verification team assigned by the DOE (TÜV Rheinland (China) Ltd.) has performed a validation & verification for the Qingdao Longxin Wind Power Project Phase I in China on the basis of VCS Version 3. The verification team concludes that the project as described in the VCS Monitoring Report (version 02, 30<sup>th</sup> January 2013) meets all relevant requirements of the above-defined criteria. The DOE therefore issues a positive verification opinion to the project.

The verification has been executed in the following steps so far:

- Desk review of preliminary VCS monitoring report (version 01, 15<sup>th</sup> January 2013), preliminary Project Description (version 01, 15<sup>th</sup> January 2013), registered CDM PDD (version 03, 18/04/2012), CDM validation report (version 01.2, 2012-07-16), applied baseline & monitoring methodology of ACM0002/Version 12.2.0
- On-site visit with stakeholder interviews (17<sup>th</sup> - 18<sup>th</sup> January 2013)
- Issue of checklist with corrective action requests (CARs) and clarification requests (CLs) and the draft verification report & protocol

- Desk review of revised VCS monitoring report (version 02, 30<sup>th</sup> January 2013) and revised Project Description (version 02, 30<sup>th</sup> January 2013)
- Review of proposed corrections and clarifications
- Issue of the final verification report & protocol

The project is a newly-built wind power project with total installed capacity of 49.8 MW. It is located in the Liyuan Town and Dianzi Town, Pingdu City, Shandong Province of P.R. China.

The project has been registered as a CDM project (CDM Registration No. 6697) with the first crediting period starting from 28<sup>th</sup> September 2012. Besides, given of the fact that the project has already started its commercial operation since 8<sup>th</sup> November 2011, the monitoring period for this VCS verification is reasonably selected from 8<sup>th</sup> November 2011 to 27<sup>th</sup> September 2012.

The project has applied ACM0002/Version 12.2.0 as its baseline and monitoring methodology. The monitoring procedures follow the methodology requirements and are demonstrated in the registered CDM-PDD.

In summary, the project activity was correctly implemented according to selected monitoring methodology and monitoring plan. The monitoring equipment was installed, calibrated and maintained in a proper manner, while collected monitoring data allowed to verify the amount of achieved GHG emission reductions of 8,510tCO<sub>2</sub> in year 2011 and 73,792tCO<sub>2</sub> in year 2012, totally to 82,302tCO<sub>2</sub> during the verification period 08/11/2011 to 27/09/2012.

## 1 INTRODUCTION

China Resources Wind Power (Qingdao) Co., Ltd. has commissioned TÜV Rheinland (China) Ltd. to verify the emission reductions of its voluntary emission reduction (VER) project, Qingdao Longxin Wind Power Project Phase I (hereafter called “the project”), located in the Liyuan Town and Dianzi Town, Pingdu City, Shandong Province of P.R. China for the period from 08/11/2011 to 27/09/2012 prior to its CDM pre-registration crediting period.

TÜV Rheinland (China) Ltd. as the validation/verification body (VVB) of the project has been accredited as a DOE by UNFCCC and also meets the competence requirements as set out in ISO 14065:2007.

### 1.1 Objective

Based on the definition of the VCS program guide Version 3, verification is the periodic independent formal review by the verification body and ex-post determination of the monitored greenhouse gas (GHG) emissions reductions during defined verification period. The objective of this verification is one-off periodic verification for the Voluntary Carbon Units (VCUs) generated by the project during the defined verification period.

The project activity was registered as a CDM project on 28<sup>th</sup> September 2012 with the UNFCCC reference number of 6697. For the detailed registration information of the project please refer to the project view page in the UNFCCC website: (<http://cdm.unfccc.int/Projects/DB/TUEV-RHEIN1342414627.77/view>).

The project began generating and supplying electricity to the North China Power Grid (NCPG) on 8<sup>th</sup> November 2011 and it was not registered under the CDM scheme until 28<sup>th</sup> September 2012. Hence the defined VCS pre-CDM registration verification period of the project would be starting from 08/11/2011 to 27/09/2012.

According to the VCS Version 3, the project registered under the CDM program is eligible to claim the VCUs generated prior to the CDM program. In addition, as set out in Registration and Issuance Process, v3.4, the verification team has performed additional validation to cover sections 1.2, 1.3, 1.5, 1.6, 1.7, 1.9, 1.10, 1.12.1, 1.12.2, 1.12.3, 1.12.4 and 1.13 set out in the VCS Project Description Template for project validation. The results of the validation in question have been integrated into the Section 2.2 below of this verification report and corresponding validation protocol is attached as Appendix A.

### 1.2 Scope and Criteria

The verification comprises an independent and objective review of the monitoring report over the monitoring period from 08/11/2011 to 27/09/2012, based on the registered CDM-PDD in part of the project design, monitoring parameters, monitoring plan, emission reduction calculation, monitoring methodology and all related evidences provided by project participant. Those documents have been reviewed and verified against VCS Version 3 requirements and associated interpretations.

On-site visit and stakeholders interviews are also performed as part of the verification process.

### 1.3 Level of assurance

The level of assurance is reasonable. The validation and verification of the project is assured reasonable by the verification team on the basis of documentation review, on-site assessment & interview and background investigation on the internet. The accuracy and calibration frequency of the monitoring instruments are confirmed appropriate. The measurement and recording frequency of monitoring parameters are assessed consistent with registered monitoring plan. The responsible team and personnel are trained and qualified. The monitoring system is established as described in registered PDD. The data transfer from monitoring meters to emission reductions calculation spreadsheet is ensured. There are no material errors, omissions and misstatements applicable to the project monitoring.

### 1.4 Summary Description of the Project

The project was registered as a CDM project on 28<sup>th</sup> September 2012 and the detailed description of the project can be referred to in the registered CDM PDD /10/ and CDM Validation Report /11/.

The project is located in the Liyuan Town and Dianzi Town, Pingdu City, Shandong Province of the People's Republic of China (P.R. China). The project involves installation and operation of 24 sets of 2,000kW and 1 set of 1,800kW wind turbine and generator (WTGs), aggregating to a total of 49.8MW installed capacity. The project achieves emission reductions by supplying zero-emission electricity to the North China Power Grid (NCPG).

The monitoring activity is verified as performed according to the registered monitoring plan. The electricity generated by the project, after through the on-site transformer, is joined by the other wind project to the Tangtian Substation of power grid.

## 2 VALIDATION PROCESS, FINDINGS AND CONCLUSION

### 2.1 Validation Process

The project is registered under CDM program and corresponding validation method & criteria and process was recorded in its CDM validation report.

With respect to additional validation requirements under VCS program, the verification team executed validation with below methodology and processes.

- Method and Criteria: the method applied to the validation includes desk review, on-site visit & follow-up interviews with project stakeholders, resolution of outstanding issues and issuance of the final validation opinion (part of verification report).  
The verification team validated the project against the requirements set out in VCS Version 3 documents, issued by VCSA.
- Document Review: the VCS PD and additional documents related to the project design and monitoring plan were reviewed to conclude the project description conforms to the

relevant requirements set out in VCS Version 3. The documents reviewed by the verification team in this regard have been listed in below Section 3.2.

- Interviews: the interviews were conducted in the course of on-site visit. The detailed information, incl. personnel, role, topics, were presented in below Section 3.3.
- Site Inspections: as part of validation, one site visit was performed. During this site visit, the physical observation, documentation review, stakeholders interview allow the verification team to confirm the project description as described in VCS PD.
- Resolution of Any Material Discrepancy: The objective of this phase of the validation is to resolve any outstanding issues which need to be clarified prior to the VVB's conclusion on the project description. In order to ensure transparency a validation protocol is customised for the project. The protocol shows in transparent manner criteria (requirements), means of validation and their results against the identified criteria. The completed validation protocol is enclosed in Appendix B to this report.

Findings established during the validation can either be seen as a non-fulfillment of VCS Version 3 and relevant requirements, or where a risk to the fulfillment of project objectives is identified. Corrective action requests (CAR) are issued, where:

- i) mistakes have been made with a direct influence on project results;
- ii) VCS Version 3 specific requirements have not been met; or
- iii) there is a risk that the emission reductions of the Project will not be certified.

A request for clarification (CL) may be used where additional information is needed to fully clarify an issue.

## 2.2 Validation Findings

### 2.2.1 Gap Validation

The project was registered under a VCS-approved GHG program, i.e., CDM program, on 28<sup>th</sup> September 2012. As per the VCS Standard, para. 3.11.8, the additional project description of the project has been provided in the provided Project Description /13/ and assessed & confirmed by the verification team as follows.

| No. of VCS PD | Provided in PD /13/                                                    | Conclusion of Verification Team                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------|------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Cover page    | <input checked="" type="checkbox"/> Yes<br><input type="checkbox"/> No | The cover page of VCS PD is prepared as per PD Template /6/.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Section 1.2   | <input checked="" type="checkbox"/> Yes<br><input type="checkbox"/> No | The project is a newly built wind power project and it falls into the sectoral scope of 01 - Energy (renewable/non-renewable) and project type is renewable wind energy based power generation project. Besides, the project is not a grouped project.                                                                                                                                                                                                                                                                      |
| Section 1.3   | <input checked="" type="checkbox"/> Yes<br><input type="checkbox"/> No | The project proponent is China Resources Wind Power (Qingdao) Co., Ltd. and its role/responsibility is identified in VCS PD.                                                                                                                                                                                                                                                                                                                                                                                                |
| Section 1.5   | <input checked="" type="checkbox"/> Yes<br><input type="checkbox"/> No | The start date of the project is appropriately identified as 08/11/2011 in VCS PD, when it starts power generation & achieving emission reductions /28/. The verification team also checked the operation log /27/ and meters readings /20//21/ and confirmed that the project generated & exported the electricity to the grid from 08/11/2011 onwards. Hence, the verification team is able to confirm that the identification of the start date is therefore in compliance with the para. 3.7 of VCS Standard Version 3. |
| Section 1.6   | <input checked="" type="checkbox"/> Yes<br><input type="checkbox"/> No | The project was registered under CDM program on 28 <sup>th</sup> September 2012 and therefore the project crediting period during which the Verified Carbon Units (VCU) can be claimed is properly identified from 08/11/2011 to 27/09/2012.                                                                                                                                                                                                                                                                                |
| Section 1.7   | <input checked="" type="checkbox"/> Yes<br><input type="checkbox"/> No | The project expects to generate 92,183tCO <sub>2</sub> e emission reductions annually which are less than 300,000tCO <sub>2</sub> e per year and it is therefore considered as scale of "project".                                                                                                                                                                                                                                                                                                                          |
| Section 1.9   | <input checked="" type="checkbox"/> Yes<br><input type="checkbox"/> No | As confirmed during CDM validation in registered CDM PDD /10/ & Validation Report /11/ and on-site assessment through the GPS system & physical observation by the verification team, the project location is correctly described in VCS PD.                                                                                                                                                                                                                                                                                |
| Section 1.10  | <input checked="" type="checkbox"/> Yes<br><input type="checkbox"/> No | Since the project is a grid-connection wind power project, the conditions prior to its initiation is the equivalent electricity would have been generated in the existing fossil fuel based power plants and by the addition of new generation sources in the NCPG, as reflected in the combined margin (CM) calculations described in the Tool to calculate the emission factor for an electricity system.                                                                                                                 |

|                |                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------|------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Section 1.12.1 | <input checked="" type="checkbox"/> Yes<br><input type="checkbox"/> No | The China Resources Wind Power (Qingdao) Co., Ltd. contains the right of use, which is comprehensively demonstrated by relevant evidences /22-24//26//28//34/.                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Section 1.12.2 | <input checked="" type="checkbox"/> Yes<br><input type="checkbox"/> No | The project was registered under CDM program and not involved in any emission trading program. In addition, the project activity is a newly built wind energy based power generation project, which has generated GHG emission reductions by avoiding CO <sub>2</sub> emissions from electricity generation of fossil fuel fired power. Operation of the project does not lead to GHG emissions. Thus it is confirmed that the project was not implemented to create GHG emissions primarily for the purpose of its subsequent removal or destruction.                                                              |
| Section 1.12.3 | <input checked="" type="checkbox"/> Yes<br><input type="checkbox"/> No | The project was only registered under CDM program and not involved in any other GHG program. As the start date of the crediting period of the project under CDM program is 28/09/2012 thus, the VCUs to be claimed during the crediting period 08/11/2011 to 27/09/2012 under VCS program are eligible according to the requirements set out in the para. 3.11.5 & 3.11.6 of VCS Standard Version 3. The CDM program has been a VCS-approved program and the requirements set out in the para. 3.11.8 of VCS Standard Version 3 specifically for approved GHG program are met by the project in this Section 2.2.1. |
| Section 1.12.4 | <input checked="" type="checkbox"/> Yes<br><input type="checkbox"/> No | The project does not generate any other form of environmental credit, confirmed by the project owner /i/.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Section 1.13   | <input checked="" type="checkbox"/> Yes<br><input type="checkbox"/> No | As the project is not a grouped project, the eligibility criteria are not applicable. The leakage management is also not applicable. No commercially sensitive information is involved. The information of grid emission factor is mentioned as further information in VCS PD.                                                                                                                                                                                                                                                                                                                                      |

As above, the start date of the project is 08/11/2011. The completion date of CDM validation is identified as 16/07/2012 when the CDM validation report was submitted for registration request /11/. The project is therefore considered to have completed its validation within two years of its start date. Hence, the project conforms to the requirement of validation deadline set out in VCS Version 3.

## 2.2.2 Methodology Deviations

N/A

## 2.2.3 Project Description Deviations

N/A

## 2.2.4 New Project Activity Instances

N/A

## 2.3 Validation Conclusion

In summary, the verification team concluded that, on the basis of above assessment, the project as described in the VCS PD version 02 of 30<sup>th</sup> January 2013 meets all relevant requirements & criteria set out in VCS Version 3.

## 3 VERIFICATION PROCESS

### 3.1 Method and Criteria

The verification consists of the following three phases:

- 1) Desk review of the monitoring plan, monitoring report, monitoring methodology, project design document, applicable tools in particular attention to the frequency of measurements, quality of metering equipment including calibration requirements, QA/QC procedures and other relevant documents;
- 2) On-site visit (including follow-up interviews with project stakeholders);
- 3) Resolution of outstanding issues and the issuance of the final Verification Report.

### 3.2 Document Review

The following table outlines the documentation reviewed during the validation and verification process.

|     |                                                                                    |

## 3.3 Interviews

The verification team carried out an on-site visit from 17/01/2013 to 18/01/2013 and performed interviews with the project representatives and stakeholders. Prior to the interview salient points to be discussed were planned. Date of interview, interviewee and points discussed are given in the following table:

|     | Date       | Name          | Organization/Title                                                                           | Topic                                                                                                                                                                                                                                                                                                                                                              |

Verification Team along with onsite observation, objective evidence collections, data generation and recording analysis also considered the views obtained in these interviews while arriving at Verification Opinion.

## 3.4 Site Inspections

As described above, the verification team performed one site assessment from 17/01/2013 to 18/01/2013, when relevant stakeholders were interviewed and documentation review was conducted. During this site visit, the verification team observed and assessed the project implementation status & its technology and monitoring system & monitoring activity, where especially the data monitoring, recording, reporting procedures.

## 3.5 Resolution of Any Material Discrepancy

The objective of this phase of the verification is to resolve any outstanding issues which need to be clarified prior to the VVB's conclusion on the project design and monitoring results. In order to ensure transparency a verification protocol is customised for the project. The protocol shows in transparent manner criteria (requirements), means of verification and their results against the identified criteria. The completed verification protocol is enclosed in Appendix B to this report.

Findings established during the verification can either be seen as a non-fulfillment of VCS Version 3 and relevant requirements, or where a risk to the fulfillment of project objectives is identified. Corrective action requests (CAR) are issued, where:

- i) mistakes have been made with a direct influence on project results;
- ii) VCS Version 3 specific requirements have not been met; or
- iii) there is a risk that the emission reductions of the Project will not be certified.

A request for clarification (CL) may be used where additional information is needed to fully clarify an issue.

## 4 VERIFICATION FINDINGS

The findings of the addition validation & verification are stated in the following sections. The validation & verification criteria (requirements), the means of validation & verification and their results against the identified criteria are documented in more detail in the validation protocol in Appendix A and verification protocol in Appendix B.

### 4.1 Project Implementation Status

The project is developed by China Resources Wind Power (Qingdao) Co., Ltd., who has justified right of use to the claimed emission reductions in the given monitoring period, i.e., 08/11/2011 to 27/09/2012 by documentation review /22-24/ and observation & confirmation obtained during site visit /1/.

The project is assessed located at the Liyuan Town & Dianzi Town, Pingdu City, Shandong Province of the P.R. China during the site visit. The technology employed by the project is utilization of wind energy for generating electricity which then has been supplied to the North China Power Grid (NCPG) according to the PPA /26/. During the on-site assessment, it was physically observed by the verification team that the power generation equipments and necessary facilities as described in the registered CDM PDD /10/ are all in place. By checking their technical specifications /29/ & grid connection diagram /25/ and the project owner's confirmation /i/, the project activity is confirmed to install 24 sets of 2,000kW and 1 set of 1,800kW wind turbines & generators and thus has total installed capacity of 49.8MW.

The start date is identified as 08/11/2011 when the project began operation and generated emission reductions /28/. The project was registered as a CDM project on 28<sup>th</sup> September 2012, before which the VCUs are claimed during the monitoring period from 08/11/2012 to 27/09/2012.

In view of project operation during the monitoring period, the verification team reviewed the operation log and considered of no events adversely impacting monitoring system occurred. In the course of the monitoring period in question, the project delivered the net electricity of 88,417.56MWh and consequently generated emission reductions of 82,302tCO<sub>2</sub>e.

Hence, the verification team confirmed that the project implemented and monitoring system established at site is consistent as described in the registered PDD /10/. In addition, there is no any remaining issue from previous validation or verification.

### 4.2 Accuracy of GHG Emission Reduction or Removal Calculations

The verification team assessed the Section 4 of the Monitoring Report /12/ and Emission Reductions Calculation Spreadsheet /14/ and confirmed that emission reductions calculations presented in them are consistent as described in the registered PDD /10/ and the methodology ACM0002/Version 12.2.0 /8/ and thus deemed appropriate.

The emission reductions of the project are calculated as the baseline emissions with consideration of both project emission and leakage as zero. The underlying formula for calculation is as follows:

$$ER_y = BE_y = EG_{PJ,y} * EF_{grid,CM,y} = (EG_{output,y} - EG_{another,y} - EG_{import,y} - EG_{im-spare,y}) * EF_{grid,CM,y}$$

Where,

$ER_y$ , the emission reductions in the year y

$BE_y$ , the baseline emissions in the year y

$EG_{output,y}$ , the total electricity supplied to the grid by the project and phase II project in the year y

$EG_{another,y}$ , the electricity supplied to the grid by the phase II project in the year y

$EG_{import,y}$ , the total electricity imported from the grid by the project and phase II project in the year y

$EG_{im-spare,y}$ , the electricity imported from the grid through a spare 10kV line in the year y

$EF_{grid,CM,y}$ , the grid emission factor, ex ante determined as 0.9309tCO<sub>2</sub>/MWh

The reported electricity data for calculating emission reductions are verified correct on the basis of the meters readings /20//21/. During the monitoring period, the phase II project began power generation & supply the electricity to the NCPG in conjunction with the project on 16<sup>th</sup> May 2012 forwards. The meter M1 magnification rate was therefore increased from 66,000 to 132,000, which is verified correct /20/.

The meter M1 installed at the Tangtian Substation measures the total electricity exported to and imported from the grid by both the project and the phase II project. The meter M2 installed at the project site measures the electricity supplied to the grid by the project. The meter M3 installed at the phase II project site measures the electricity supplied to the grid by the phase II project. The meter M4 installed at the 10kV transmission line measures the electricity imported from the 10kV line to the project. As per the registered monitoring plan /10/, the electricity supplied to the grid by the project is determined by readings difference of meter M1 and M3. In the conservative point of view, the electricity supplied to the grid by the project is cross-checked by the M2 readings and the minimum value of M2 and M1-M3 is applied for calculation. In addition, the total electricity imported from the grid by the project and the phase II project is taken as the electricity imported to the project, which is conservative. In summary, the electricity value & corresponding emission reductions in each month during the concerned monitoring period have been verified and tabulated below.

| Period (dd/mm/yy)       | Net electricity supplied to the grid by the project (MWh) | Grid emission factor (tCO <sub>2</sub> e/MWh) | Emission reductions (tCO <sub>2</sub> e) |
|-------------------------|-----------------------------------------------------------|-----------------------------------------------|------------------------------------------|
|                         | A                                                         | B                                             | C=rounddown (A*B, 0)                     |

| 26/06/2012-<br>25/07/2012                         | 5,292.76  |  | 4,927  |
| 26/07/2012-<br>25/08/2012                         | 5,282.20  |  | 4,917  |
| 26/08/2012-<br>27/09/2012                         | 5,264.60  |  | 4,900  |
| Total for 2012                                    | -         |  | 73,792 |
| <b>Total for<br/>08/11/2011 to<br/>27/09/2012</b> | 88,417.56 |  | 82,302 |

In above table, the emission reductions for individual month are calculated first based on the “rounddown function” and then summed up to the total emission reductions during the monitoring period, which is conservative compared to the calculation method where the total emission reductions are determined by total net electricity supply during the monitoring period multiplying grid emission factor.

Hence, the emission reductions for each month, for year 2011 & 2012 respectively, and total of them during the monitoring period have been correctly displayed in above table.

### 4.3 Quality of Evidence to Determine GHG Emission Reductions or Removals

The emission reductions during the given monitoring period are determined based on the grid emission factor and the net electricity supplied to the NCPG. The grid emission factor is calculated as 0.9309tCO<sub>2</sub>/MWh in the registered PDD /10/. The net electricity supplied to the grid is represented by the electricity exported to & imported from the grid and reflected in the meter readings /20//21/.

The verification team has reviewed the above-mentioned evidences and considered that the consistency of values between them and the VCS Monitoring Report /12/ is ensured.

The monitoring equipments have been installed for the project according to the registered monitoring plan /10/. The verification team reviewed the calibration reports of the installed monitoring instrument and confirmed that their calibration frequencies and measurement accuracies are in compliance with the monitoring plan of the registered PDD /10/ below.

| <b>Validity of Certifier</b>       | Certificate of Metrological Authorization to Shandong Institute of Metrology, issued by General Administration of Quality Supervision, Inspection and Quarantine of the People's Republic of China on 1 <sup>st</sup> December 2007, and valid to 30 <sup>th</sup> November 2012 /19/ |                                                                          |                                                                          |                                                                          |
| <b>Relevant sectoral standard:</b> | Technical administrative code of electric energy metering, DL/T 448-2000                                                                                                                                                                                                              | Technical administrative code of electric energy metering, DL/T 448-2000 | Technical administrative code of electric energy metering, DL/T 448-2000 | Technical administrative code of electric energy metering, DL/T 448-2000 |

In summary, the verification team is able to verify that the accuracy of the monitoring equipments are set according to the registered monitoring plan /10/ and relevant technical administrative code of electric energy metering, DL/T 448-2000 of P.R. China /33/. Thus, those metering instruments are deemed valid and accuracy of monitoring data is ensured during the monitoring period.

#### 4.4 Management and Operational System

By means of on-site assessment & interview, the verification team has ensured that the quality management system for the project is in place. As confirmed by the project representative /i/, the monitoring activity has been implemented by the monitoring group established as per the registered PDD /10/. The according responsibilities to the monitoring group in the Monitoring Report /12/ are consistent with the monitoring manual, served as the basis of the monitoring activity /10/. For proper monitoring, the corresponding training was held on 12<sup>th</sup> October 2011 /31/ and relevant operation & monitoring personnel have received competence certificates /32/.

### 5 VERIFICATION CONCLUSION

The verification team assigned by the DOE (TÜV Rheinland (China) Ltd.) has performed verification for the Qingdao Longxin Wind Power Project Phase I on the basis of VCS Version 3, as well as criteria given to provide for consistent project operations, monitoring and reporting. The verification team concluded that the project as described in the VCS Monitoring Report (version 02, 30<sup>th</sup> January 2013), meets all relevant requirements of the above-defined criteria. The DOE therefore issues a positive verification opinion.

The verified emission reductions of the project during the concerned monitoring period from 08/11/2011 to 27/09/2012 are displayed as follows:

| GHG Emission Reductions or Removals | tCO <sub>2</sub> e |
|-------------------------------------|--------------------|
| Baseline Emissions                  | 82,302             |
| Project Emissions                   | 0                  |
| Leakage                             | 0                  |

|                                         |        |
|-----------------------------------------|--------|
| Net GHG emission reductions or removals | 82,302 |
|-----------------------------------------|--------|

| 1.6 Project Crediting Period – the crediting period of project should be indicated with start/end dates.                                                                  | /1/, /2/, /6/, /13/       | DR<br>OSV<br>I    | The project activity was registered 28 Sep. 2012 under the CDM program <a href="http://cdm.unfccc.int/Projects/DB/TUEV-RHEIN1342414627.77/view">http://cdm.unfccc.int/Projects/DB/TUEV-RHEIN1342414627.77/view</a> . Given of the start date as of 08/11/2011, the crediting period of the project under VCS program is appropriately identified from 08/11/2011 to 27/09/2012 (incl. both days). |                  | OK                            |
| 1.7 Project Scale and Estimated GHG Emission Reductions or Removals – the project scale (project or large project) and estimated emission reductions should be indicated. | /1/, /2/, /6/, /13/       | DR<br>OSV<br>I    | <p>Per the registered PDD, the annual emission reductions of the project are estimated as 92,183tCO<sub>2</sub>e.</p> <p>The project scale (project or large project) is not properly identified &amp; justified in VCS PD according to the para. 3.9.1, VCS Standard.</p>                                                                                                                        | <del>CL01</del>  | OK<br>(pls. refer to table 3) |
| 1.9 Project Location – the project location and geographic boundary should be indicated.                                                                                  | /1/, /2/, /6/, /13/       | DR<br>OSV<br>I    | The project location is same as described in the registered PDD, which was validated and verified by the verification team through on-site measurements.                                                                                                                                                                                                                                          |                  | OK                            |

| Checklist question                                                                                                                                                                                                                 | Ref.                                              | MoVa <sup>1</sup> | Findings, comments, references, data sources                                                                                                                                                                                                                                                                                                                                                                                                                                     | Draft conclusion | Final conclusion |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|------------------|
| 1.10 Conditions Prior to Project Initiation – the conditions prior to project implementation should be described. Besides, the project not generate GHG emissions for the purpose of subsequent reductions should be demonstrated. | /1/, /2/, /6/, /13/                               | DR<br>OSV<br>I    | The project is a newly built wind power project. Prior to its implementation, the electricity generated by the project would otherwise be produced by the operation of grid-connected power plants and by the addition of new generation sources within the grid. Operation of the project does not lead to GHG emissions. Thus it is confirmed that the project was not implemented to create GHG emissions primarily for the purpose of its subsequent removal or destruction. |                  | OK               |
| <b>1.12 Ownership and Other Programs</b>                                                                                                                                                                                           |                                                   |                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                  |                  |
| 1.12.1 Right of Use – the right of use should be justified through documented evidences.                                                                                                                                           | /1/, /2/, /6/, /13/, /22/, /23/, /24/, /26/, /28/ | DR<br>OSV<br>I    | The relevant evidences are provided and they demonstrate of right of use of the VCUs to be produced by the project.                                                                                                                                                                                                                                                                                                                                                              |                  | OK               |
| 1.12.2 Emissions Trading Programs and Other Binding Limits – if the project activity of reducing emissions is included in any emission trading program, the appropriate evidence should be provided for avoiding double counting.  | /1/, /2/, /6/, /13/                               | DR<br>OSV<br>I    | The project was registered under CDM program, which is not an emission trading program but one project-based mechanism. Besides, the emission reductions generated during the monitoring period 08/11/2011 to 27/09/2012 will not be claimed under CDM program.                                                                                                                                                                                                                  |                  | OK               |
| 1.12.3 Participation under Other GHG Programs – If the project activity is registered under an approved GHG program, the details should be provided.                                                                               | /1/, /2/, /6/, /13/                               | DR<br>OSV<br>I    | The project activity has been registered as a CDM project on 28 <sup>th</sup> Sep. 2012 with the reference number of 6697 and thus the first crediting period begins from 28 <sup>th</sup> Sep. 2012. For details, pls. review                                                                                                                                                                                                                                                   |                  | OK               |

| Checklist question                                                                                                                                                                             | Ref.                | MoVa <sup>1</sup> | Findings, comments, references, data sources                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Draft conclusion | Final conclusion |

| 1.3 If the project activity is implemented on a number of different locations, has the Monitoring report provided the verifiable starting dates for each site? | /1/<br>/2/<br>/6/<br>/13/ | DR<br>OSV         | Not applicable since the project is a newly built wind power project located on one single site.                                    |                  | OK               |
| <b>2. Monitoring plan and methodology</b>                                                                                                                      |                           |                   |                                                                                                                                     |                  |                  |
| 2.1 Is the monitoring plan established in accordance with the monitoring methodology?                                                                          | /1/<br>/2/<br>/6/<br>/13/ | DR                | Yes. The monitoring plan described in the registered PDD is fully compliance with the selected methodology ACM0002, version 12.2.0. |                  | OK               |
| 2.2 In case the implemented monitoring plan defers from the monitoring methodology, has it been assessed and documented in verification report?                | /1/<br>/2/<br>/6/<br>/13/ | DR                | Not applicable.                                                                                                                     |                  | OK               |
| <b>3. Monitoring and the monitoring plan</b>                                                                                                                   |                           |                   |                                                                                                                                     |                  |                  |
| 3.1 Is monitoring established in full compliance with the monitoring plan, contained in the registered PDD?                                                    | /1/<br>/2/<br>/6/<br>/13/ | DR<br>I<br>OSV    | Yes.                                                                                                                                |                  | OK               |
| 3.2 Are all baseline emission parameters monitored and updated in accordance with monitoring plan, monitoring methodology?                                     | /1/<br>/2/<br>/6/<br>/13/ | DR<br>I           | Yes.                                                                                                                                |                  | OK               |
| 3.2.1 Was the monitoring equipment for baseline emission parameters controlled and monitoring results recorded as per approved frequency?                      | /1/<br>/2/<br>/6/<br>/13/ | DR<br>I<br>OSV    | Yes.                                                                                                                                |                  | OK               |

| Checklist question                                                                                                                                              | Ref.                                                     | MoVe <sup>2</sup> | Findings, comments, references, data sources                                                           | Draft conclusion | Final conclusion |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------|-------------------|--------------------------------------------------------------------------------------------------------|------------------|------------------|
| 3.2.2 Was the monitoring equipment for baseline emission parameters calibrated in accordance with QA&QC procedures described in the registered monitoring plan? | /1/<br>/2/<br>/6/<br>/13/<br>15/<br>/16/<br>/17/<br>/18/ | DR<br>I           | Yes. All monitoring equipments were calibrated and accuracy was ensured during this monitoring period. |                  | OK               |
| 3.3 Are all project emission parameters monitored and updated in accordance with monitoring plan, monitoring methodology?                                       | /1/<br>/2/<br>/6/<br>/13/                                | DR<br>I<br>OSV    | Not applicable since no project emission is applicable to the project as per the registered PDD.       |                  | OK               |
| 3.3.1 Was the monitoring equipment for project emission parameters controlled and monitoring results recorded as per approved frequency?                        | /1/<br>/2/<br>/6/<br>/13/                                | DR<br>I<br>OSV    | Not applicable.                                                                                        |                  | OK               |
| 3.3.2 Was the monitoring equipment for project emission parameters calibrated in accordance with QA&QC procedures described in the registered monitoring plan?  | /1/<br>/2/<br>/6/<br>/13/                                | DR<br>I<br>OSV    | Not applicable.                                                                                        |                  | OK               |
| 3.4 Are all leakage emission parameters monitored and updated in accordance with monitoring plan, monitoring methodology?                                       | /1/<br>/2/<br>/6/<br>/13/                                | DR<br>I<br>OSV    | Not applicable since no leakage emission is applicable to the project as per the registered PDD.       |                  | OK               |
| 3.4.1 Was the monitoring equipment for leakage emission parameters controlled and monitoring results recorded as per approved frequency?                        | /1/<br>/2/<br>/6/<br>/13/                                | DR<br>I<br>OSV    | Not applicable.                                                                                        |                  | OK               |

| Checklist question                                                                                                                                                                                                              | Ref.                                                    | MoVe <sup>2</sup> | Findings, comments, references, data sources | Draft conclusion | Final conclusion |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------|-------------------|----------------------------------------------|------------------|------------------|
| 3.4.2 Was the monitoring equipment for leakage emission parameters calibrated in accordance with QA&QC procedures described in the registered monitoring plan?                                                                  | /1/,<br>/2/,<br>/6/,<br>/13/                            | DR<br>I<br>OSV    | Not applicable.                              |                  | OK               |
| 3.5 Were all monitoring parameters available and verifiable through the whole monitoring period?                                                                                                                                | /1/,<br>/2/,<br>/6/,<br>/13/,<br>/21/,<br>/22/          | DR<br>I<br>OSV    | Yes.                                         |                  | OK               |
| 3.5.1 In case, only partial monitoring data is available and PP(s) provide estimations or assumptions for the rest of data, was it possible to verify those estimations and assumptions?                                        | /1/,<br>/2/,<br>/6/,<br>/13/,<br>/21/,<br>/22/          | DR<br>I<br>OSV    | Not applicable.                              |                  | OK               |
| 3.6 Was management and operation system established and operated in accordance with the monitoring plan?                                                                                                                        | /1/,<br>/2/,<br>/6/,<br>/13/,<br>/30/                   | DR<br>I<br>OSV    | Yes.                                         |                  | OK               |
| 3.7 Was it possible to verify that involved management and operation personnel are fully aware of the responsibilities and perform all operations according to the registered monitoring plan and internally developed manuals? | /1/,<br>/2/,<br>/6/,<br>/13/,<br>/30/,<br>/31/,<br>/32/ | DR<br>I<br>OSV    | Yes.                                         |                  | OK               |

| Checklist question                                                                                                                                                                                                                                                                                                                                                                | Ref.                                      | MoVe <sup>2</sup> | Findings, comments, references, data sources | Draft conclusion | Final conclusion |
