SECTION A. DESCRIPTION OF PROJECT

A.1 Purpose and general description of project

The project activity involves dissemination of solar cookers in households of Zambia. It aims at establishing an ecosystem, driven by self-sustaining market value chains, for the dissemination and maintenance of clean household energy technologies.

Afstor Solar Cooker includes 2 solar panels, an integrated energy storage, an induction stove, and power socket (for LED-lighting, charging phone) and a monitoring system for measuring cooking hours and a CO2 tracking website. Afstor Solar Cooker consists of components of highest quality which are packed inside a metal case. This makes the Solar Cooker suitable for use in demanding conditions in the countryside. So far the project has distributed about 100 solar cookers translating to 800 people having access to clean cooking technology. The smart cooker is also being used as a hotspot to provide internet to the learners and teachers. 690 pupils at Chiyumu and 731 pupils in Kaloba have access to the internet from the solar cooker. Additionally, 28 teachers in these areas have access to the internet using the solar cooker. They use the internet to prepare and do research as they do lesson planning. Also, the provision of internet has helped to improve communication between the schools and the district local government offices (E-governance).

In absence of the project, households cook on traditional stoves with conventional fuels, mainly firewood and charcoal. The project targets users of wood fuel. The smart solar cooker is generally used to replace firewood and charcoal for cooking. Recent studies have shown that indoor pollution from cooking using firewood and charcoal causes an estimated of almost 10,000 premature deaths annually in Zambia (WHO,2022b), mainly women and girls. On average, a family in the project area uses 4000kg of firewood for cooking per year, which is equal to 6400kg of CO2 per year that is released into the atmosphere. The solar cookstoves will significantly reduce the biomass fuel consumption for project stove users by virtue of their high thermal efficiency as compared to traditional three stone fired /mud stove/ conventional cookstoves (baseline). Besides, the indoor air pollution (emission of Particulate matter, black carbon, smoke, GHGs etc.) associated with traditional cooking practices will also be reduced due to use of improved cooking technology. The primary beneficiaries of the project will be poor women and children since indoor air pollution association with

traditional forms of cooking disproportionately affects them. In addition, the burden of drudgery related to collection of biomass fuel, borne exclusively by women and girls will reduce in project households.

A.1.1. Eligibility of the project under Gold Standard

General eligibility criteria under condition 3.1.1 of GS4GG Principles and Requirements

a) Types of Project	The project meets this criterion since it falls under the pre-identified eligible project types under the GS Activity Requirement 'Community Services' in 3.1.1. The distributed electric cooking sets fall under (b) End-use energy efficiency: "Project activities that reduce energy requirements as compared to baseline scenario without affecting the level and quality of services or products, where the end-user of the products and services are clearly identified and when the physical intervention is required at the user end. For example, efficient cooking, heating, lighting, etc."
b) Location of Project	The project is located in Zambia.
c) Project Area, Boundary and Scale	The project is not registered under any other compliance or voluntary carbon project scheme. There is no risk of double counting as only households that are not currently participating in another carbon credit programme are eligible for participation. Furthermore, the electric cooking equipment distributed through the project is marked with unique identifiers and is registered in a database. The micro-scale limit of 10,000 tCO _{2eq} per annum is applied.
d) Host Country Requirements	The project complies with Zambia's legal, environmental, ecological and social regulations. Zambia currently does not have any emission trading scheme or emission reduction cap enforced.
e) Contact Details	The contact details for Afstor OY are given in Appendix 1.

f) Legal Ownership	Users transfer the legal ownership of the verified emission reduction to Afstor OY in the purchase/end user agreement for the solar cooking sets.
g) Other Rights	No other rights are affected by the project implementation.
f) Official Development Aid Declaration	No ODA is involved in the project funding. The ODA declaration will be provided.

Eligibility requirements of the Community Service Activity Requirements

Eligible Project Types		
2.1.1	All Community Service Activities (CSA – as defined in this document) for which Gold Standard certification is being sought shall fulfil the requirements as set out in this document and those referenced or associated	The Project fulfils all requirements as set out in the relevant documents.
2.1.2	All CSA Projects shall lead to climate change mitigation and/or adaptation by providing or improving access to services/resources at the household or community or institution level. Eligible services include electricity and energy, water and sanitation, waste management, housing, etc.	The Project contributes to climate change mitigation and adaptation by providing access to clean solar cooking to households previously relying on biomass for cooking.
2.1.3	In relation to the above, all Projects shall, therefore, conform to the Principles & Requirements (and associated documents).	The Project conforms to the Principles & Requirements.
General eligibility criteria		
3.1.3	Types of Project	b) The project falls under the project type End-use energy efficiency, because it reduces the energy requirement of end-users as compared to the baseline scenario and improves the level and

		quality of service (cooking). These solar cooking sets are implemented at the user end.
3.1.2	Project area, boundary and scale	a) The micro-scale limit of 10,000 tCO _{2eq} per annum is applied.
3.1.3	Suppressed demand	Not applicable
3.1.3	Legal ownership	a) The entitlement of the emission reductions generated by the project shall be transferred to the project developer from the beneficiary households through a signed covenant. b) The generation of carbon credits and the transfer of emission reductions was discussed during the Local Stakeholder Consultation meetings.

A.1.2. Legal ownership of products generated by the project and legal rights to alter use of resources required to service the project

Afstor Oy is the full and uncontested legal owner of the product. The legal ownership of the emission reductions is with Afstor Oy. The same was discussed during the Local Stakeholders Consultation meeting. User Agreement have been signed agreements with all the beneficiaries confirming the transfer of all legal rights of the emission reductions.

A.2 Location of project

Host country: Zambia

Geographical location: The project is implemented across Zambia and not limited to any specific provinces. The GPS coordinates of Zambia are - 13.1339° S, 27.8493° E

A.3 Technologies and/or measures

Afstor Solar Cooker includes 2 solar panels, an integrated energy storage, an induction stove, and power socket (for LED-lighting, charging phone) and a monitoring system for measuring cooking hours and a CO2 tracking website. Afstor Solar Cooker consists of components of highest quality which are packed inside a metal case. This makes the Solar Cooker suitable for use in demanding conditions in the countryside.

The Technical specifications are listed below:

- 2 pcs 300W solar panels, totally 600W.
- Integrated battery into cooker.
- Induction cooker.
- 12v socket for Lightning and other appliances.
- Hour meter for calculating usage hours and unique identifier.
- CO₂ tracking website.
- 21 years of working life for system.
- 7 years of working life for battery.
- 2 years warranty.
- The system is manufactured in Finland and assembled in Zambia.
- Dimensions: 85 x 45 x 50 cm.

In order to avoid double counting, the PP has placed a procedure in which the details of the end user (HH) along with name, village, district & along with unique serial number are recorded in their database.

Proposed project will contribute to various dimensions of sustainable development. The project contributes directly in achieving the SDG#3 & SDG#7 in addition to SDG#13 as required by Principle-1 of GS4GG.

- Environmental Benefits: Reduction in fossil consumption and emission of greenhouse gases (SDG#13).
- Health Benefits: Sufficiently enhance indoor air quality thereby improving health of women and children and reducing incidences of smoke and fire related injuries (SDG#3).
- Social Benefits: Ensure access to affordable, reliable, sustainable and modern energy for all (SDG#7)

A.4 Scale of the project

The project is microscale as the stoves that will be used in this project are expected to represent an annual CO₂ reduction lower than 10,000 tonnes of CO₂e.

A.5 Funding sources of project

Afstor Oy, finances the project. Carbon revenue generated through this project is used to scale up and expand the project activities. It will neither receive public funding nor funding from Official Development Assistance (ODA) to implement the project. A signed Official Development Assistance (ODA) Declaration is provided to declare that no public funding has been done for this project.

SECTION B. APPLICATION OF APPROVED GOLD STANDARD METHODOLOGY (IES) AND/OR DEMONSTRATION OF SDG CONTRIBUTIONS

B.1. Reference of approved methodology (ies)

The project applies the Gold Standard Methodology: Gold Standard “Methodology for metered & measured energy cooking devices”, version 1.2.

B.2. Applicability of methodology (ies)

Applicability Criterion as in 2.2 of MECS	Justification of applicability
This methodology is applicable to project activities that introduce technologies that reduce or avoid greenhouse gas (GHG) emissions and quantify emission reductions from cooking devices through direct measurement of energy or fuel consumed, in households, communities, and/or institutions such as schools, prisons or hospitals (hereinafter referred as end-users).	The project involves distribution of solar cookers that reduced GHG emissions and quantifies emissions reductions through a monitoring system for measuring cooking hours and a CO2 tracking website. The end users are households in Zambia. The stoves will have remote measurement of stove running time, delivering additional real-time data that will be used to check that fuel consumption rates from stove usage.
This methodology may be applied by project developers promoting the installation of improved cooking devices, where the actual amount of energy or fuel used in the project scenario is measured directly in real-time for every device or otherwise monitored via measurement. The methodology includes the following metered cooking devices, but is not restricted to: a. electric cookstove,	The project involves distribution of solar cookers that reduced GHG emissions and quantifies emissions reductions through a monitoring system for measuring cooking hours and a CO2 tracking website. The stoves will have remote measurement of stove running time, delivering additional real-time data that will be used to check that fuel consumption rates from stove usage.

b. electric pressure cooker (EPC) and other devices with characteristics where the cooking energy is influenced by factors other than temperature such as cooking pressure, c. LPG cookstove, d. biogas stoves, e. bio-ethanol cookstoves. In the case of cooking devices using fuel, the amount of fuel purchased for cooking by each customer shall be recorded with arrangements to ensure the fuel is used for cooking and to prevent the alternative use of the fuel.	
Project shall choose a technology design that has predictable performance in that it is proven to be efficient and durable under field conditions; for cook stoves, the rated thermal efficiency shall be at least 40%	The certified thermal efficiency is 71% for solar cooker (certificate provided) which is above the 40% threshold. The solar cooker has proven to be efficient during days of reduced sunshine and night time.
The technology shall have continuous useful energy output of less than 150kW per unit, where "continuous useful energy output" is defined as the total useful energy delivered from start to end of operation of a unit divided by time of operation	The max. energy output of the Afstor solar cooker is 1400W. (As shown in the Data sheet provided).
The project activity is implemented by a project developer and can include additional project participants. However, the individual households and institutions do not act as project participants.	It is confirmed that individual households and other stove users will not act as project participants. (As stated in the signed User Agreement). The project is implemented by Afstor Oy.

The project developer must design incentive mechanism(s), which should be effective as fast as possible, for the elimination of any inefficient baseline stoves that are replaced entirely by the project cooking device(s) and describe the incentive mechanism(s) in the PDD/VPA-DD at the time of validation.	The most effective incentive is the cost advantage of cooking with solar cooker. Further, PP will conduct campaigns as part of the incentive mechanism to encourage removal of baseline stoves in place.
To avoid double counting or double claiming, the project developer must: i. clearly communicates its ownership rights and intention of claiming the emission reductions resulting from the project activity to the following parties by contract or clear written assertions in the transaction paperwork: all other project participants; project technology manufacturers; and retailers of the project technology or the renewable fuel in use; and ii. inform and notify the end users that they cannot claim emission reductions from the project, and iii. ensure the technologies counted in the project shall neither be included in any other voluntary market or CDM project activity/PoA, nor displace the technologies of another CDM or voluntary project/PoA. See data and parameters not monitored, avoidance of double counting or double claiming with other mitigation actions, for details on this demonstration	i. The transfer of ownership on carbon credits has been discussed during the LSC and it is confirmed by each individual user in the signed User Agreement. ii. The same is also confirmed in the User Agreement iii. This is ensured by a unique identification number of each household receiving a stove under this project. The same will be recorded in a database

Under this methodology, emission reductions cannot be claimed for fuel-switch only. Proposed project activities also need to introduce new technologies, i.e. technology switch is also involved	The project introduces a smart solar cooker, a new technology.
For project cooking devices that use fossil fuel only emission reductions from efficiency improvement are eligible	Not applicable. Solar cook stove uses only sunlight & electricity generated by solar PV.
For project cooking device that use grid electricity, only emission reductions from efficiency improvement are eligible.	Not Applicable. No grid electricity is used for cooking. Solar cooker uses solar panels and power is stored in a battery. Surplus power can be used for lighting or phone charging, thereby even replacing grid electricity.
The measured fuel or energy is used to calculate both baseline and project emissions. The project developer must have systems in place to monitor.	Fuel consumption of all project devices will be monitored continuously and thoroughly and recorded on a monthly basis.

B.3. Project boundary

The project boundary is the physical, geographical site of baseline and project solar stoves and fuel collection/production areas. The physical boundary of the project is shown in the map in section A.1 of this document

Source	GHGs	Include?	Justification/Explanation
Baseline	CO ₂	Yes	Major source of emission
	CH ₄	No	Not required by methodology
	N ₂ O	No	Not required by methodology
Project	CO ₂	No	Major source of emission
	CH ₄	No	Not required by methodology

N₂O

No

Not required by methodology

B.4. Establishment and description of baseline scenario

In absence of the project, households cook on traditional stoves with conventional fuels, mainly firewood and charcoal (wood fuel). The project targets users of wood fuel as primary fuel. The smart solar cooker is generally used to replace firewood and charcoal for cooking. Recent studies by the World Health Organisation (WHO) have shown that indoor pollution from cooking using firewood and charcoal causes an estimated of almost 10,000 premature deaths annually in Zambia (WHO,2022b), mainly women and girls. On average a family in the project area uses 4000kg of firewood for cooking per year which is equal to 6400kg of CO₂ per year that is released into the atmosphere. Thus, the need to look at clean cooking options such as the solar cooker. Calculations based on data from the cook stoves collected by Afstor, shows that the efficiency of the traditional three stone is 10% as compared to the solar cooker which is 71% efficiency. A detailed study (2022) on cooking fuels was conducted in Lusaka by the Alternatives to charcoal (A2C) project, funded by USAID). This study and/or additional recent studies will be used to substantiate the baseline. A national survey by the Zambian government in 2017 showed average charcoal consumption > 1 ton per household and year.

Currently in 2023, some 16% of the population in Zambia has access to clean cooking. ¹ As per FAO data on Zambia, 2019², the per household consumption of fuelwood and charcoal for rural areas are 2.76 ton/HH/year and 2.87 ton/HH/year.

The sources of energy used for cooking include, wood-fuel (charcoal and firewood), accounting for about 78%, with electricity contributing around 11% to the total energy consumed.³ Considering that 78% is charcoal and firewood both, hence, 50-50 for each.

B.5. Demonstration of additionality

Specify the methodology, activity requirement or product requirement that establishes deemed additionality for the proposed project (including the version number and the specific paragraph, if applicable).	As per Gold standard Community Services Activity Requirements, Para 4.1.9, Projects that meet any of the following criteria are considered as deemed additional and therefore are not required to prove Financial Additionality at the time of Design Certification: (a) Positive list (Annex B of the document) (b) Projects located in LDC, SIDS, LLDC (c) Microscale projects It is noteworthy that the VPA will be of microscale type since it is applying the simplified methodology for efficient cookstoves which is for micro scale level and as per para 2.1.1c of the Gold standard Microscale Project requirements, the annual emission reductions achieved will be limited to a maximum of 10,000 tonnes of CO₂eq in each and every year of the crediting period.
Describe how the proposed project meets the criteria for deemed additionality.	As described above, the project will be of microscale type since the annual emission reductions achieved will be limited to a maximum of 10,000 tonnes of CO₂eq in each and every year of the crediting period.

B.5.1 Prior Consideration

The project is retroactive. Hence, the first submission (on 07/07/2021) is within one year of the project start date i.e. 03/05/2021.

B.5.2 Ongoing Financial Need

N/A

B.6. Sustainable Development Goals (SDG) outcomes

Relevant Target/Indicator for each of the three SDGs

SUSTAINABLE DEVELOPMENT GOALS TARGETED	MOST RELEVANT SDG TARGET	SDG IMPACT
		INDICATOR (PROPOSED OR SDG INDICATOR)
SDG 13	13.2 Integrate climate change measures into national policies, strategies and planning	13.2.2 Total greenhouse gas emissions per year
SDG 07	7.1 By 2030, ensure universal access to affordable, reliable and modern energy services	7.1.2 Proportion of population with primary reliance on clean fuels and technology
SDG 03	3.9 By 2030, substantially reduce the number of deaths and illnesses from hazardous chemicals and air, water and soil pollution and contamination.	3.9.1 Mortality rate attributed to household and ambient air pollution

B.6.1 Explanation of methodological choices/approaches for estimating the SDG Impact

SDG 13:

Baseline emissions:

The project will use the following approach to calculate the baseline emissions which is in line with para 3.5.3 of the applied methodology.

Case 1: It is possible to determine the thermal efficiency of the project device and to know the useful energy that is being replaced. The baseline emissions shall be calculated from the total electric energy input used in the project scenario in year y , the energy ratio of the specific energy consumption of baseline device(s) and the project device, and the baseline emissions factor:

$$BE_y = EG_{p,useful,y} \times EF_{b,useful} \quad Eq. 3$$

Where:

$$\begin{aligned} BE_y &= \text{Baseline emissions (tCO}_2\text{e) in the year } y \\ EG_{p,useful,y} &= \text{The amount of useful energy applied in the project in year } y \text{ (TJ)} \\ EF_{b,useful} &= \text{Baseline emissions factor (tCO}_2\text{e per TJ of useful energy)} \end{aligned}$$

The useful project energy in year y shall be calculated as follows (Case 1):

$$EG_{p,useful,y} = \sum_d EG_{p,d,y} \times 0.0036 \times \eta_{p,d,y} \quad Eq. 6$$

Where:

$$\begin{aligned} EG_{p,d,y} &= \text{The amount of electricity used in the project scenario by device } d \text{ in year } y \text{ (MWh)} \\ 0.0036 &= \text{Factor to convert MWh to TJ} \\ \eta_{p,d,y} &= \text{Energy efficiency of the project device, } d \text{ in year } y \text{ (fraction)} \\ d &= \text{Project device } d \end{aligned}$$

The baseline emission factor shall be determined applying the equation below (Case 1):

$$EF_{b,useful} = \sum_k \left(\sum_{i,j} P_{b,i,j} \times \text{Percentage of fuel}_i \times (EF_{b,i,CO_2} \times fNRB_{i,y} + EF_{b,i,non-CO_2}) \times NCV_{b,i} \right) \div \sum_k \left(\sum_{i,j} P_{b,i,j} \times \text{Percentage of fuel}_i \times NCV_{b,i} \times \eta_{b,i,j} \right) \quad \text{Eq. 1}$$

Where:

$EF_{b,useful}$	=	Baseline emissions factor (tCO ₂ e per TJ of useful energy)
$P_{b,i,j}$	=	Amount of baseline fuel i used in device j in the baseline (tonnes)
EF_{b,i,CO_2}	=	CO ₂ Emission factor of the baseline fuel i (tCO ₂ e/TJ)
$EF_{b,i,non-CO_2}$	=	Non-CO ₂ Emission factor of the baseline fuel i (tCO ₂ e/TJ)
$fNRB_{i,y}$	=	Non-renewability status of woody biomass fuel i during year y
$NCV_{b,i}$	=	The net calorific value of the baseline fuel type i (TJ/tonne)
$\eta_{b,i,j}$	=	Efficiency of baseline device j with fuel i (fraction)
$\text{Percentage of fuel}_i$	=	Percentage of fuel type i in the baseline situation (%).
k	=	Household k from the target population, where applicable
j	=	Baseline devices j
i	=	Baseline fuel i

Project emissions:

As per para 3.6.2 of the applied methodology, where project devices use renewable energy, such as solar energy, there are no project emissions. Hence, the project emissions will be considered zero in this case, since it involves distribution of solar cookers.

Leakage emissions:

The leakage emissions (LEy) shall be determined by applying a default adjustment factor of 0.95 to the emission reductions.

Emission reductions:

The emission reductions are calculated as follows:

$$ER_y = BE_y - PE_y - LE_y$$

Where:

ER_y = Emission reductions in year y (t CO₂e/yr)

BE_y = Baseline emissions in year y (t CO₂e/yr)

PE_y = Project emissions in year y (t CO₂e /yr)

LE_y = Leakage emissions in year y (t CO₂e /yr)

Sustainable Development Goal parameters calculations –

In the proposed project, PP has consider to monitor SDG 3 (Good Health and Well being) & SDG 7 (Affordable and Clean energy) apart from SDG13 (Climate action).

For SDG 3,

Measurement through household surveys of user perceptions between baseline stove and solar stoves: perceived smoke levels, incidence of coughing, incidence of respiratory illness, Incidence of itchy eyes

PP will collect information from the HH user on the number of visit they made to the hospitals due to smoke related problems in a year. The value will be calculated (on qualitative basis) based on the total number of HH survey and the number of HH reported at least one time visit to the hospital for breathing related problem caused due to the smoke and HH reported no change in smoke and illness due to smoke. Apart from this PP will collect information on incidence of cough, respiratory problem &

incidence of itchy eye post usage of solar cooker in a given year and the value will be calculated (on a qualitative basis) on the number of incident reported by the HH users.

N_s = number of HH surveyed based on the sample calculations

N_1 = Number of respondent who said that smoke reduced drastically

N_2 = Number of respondent who said that smoke reduced to some extent

Percentage of HH who said that smoke reduced drastically = N_1/N_s

Percentage of HH who said that smoke reduced to some extent = N_2/N_s

N_3 = Number of respondent who said that they did not visit hospital for breathing related illness

N_4 = Number of respondent who said that they visit the hospital or faced breathing related issues

So, % improvement in health due to the solar cooker will be calculated as = N_3/N_s %

N_r = no of responded not faced respiratory problem

N_c = no of respondent not faced cough issues

N_i = no of responded not faced itchy eye incidence

% of respondent not facing respiratory problem = N_r/N_s %

% of respondent not facing cough problem = N_c/N_s %

% of respondent not facing itchy eye problem = N_i/N_s %

For SDG 7,

For this project, the baseline is the number of households using clean energy for cooking before the implementation of this project.

$n_o = n_b - n_p$

Where:

N_o = the increased number of households using clean energy for cooking after the implementation of this project

N_b = the number of households using clean energy for cooking before the implementation of this project. The value applied is 0.

N_p = the number of households using clean energy for cooking after the implementation of this project is surveyed every year during the project.

In this project, each household will get only one set of solar cooker, thus

$N_p = N$

Where:

N The total number of solar cooker installed by the proposed project. The value adopted is 520.

B.6.2 Data and parameters fixed ex ante

SDG13

Data/parameter	$P_{b,i,j}$
Unit	Tonnes
Description	Amount of baseline fuel i used in device j (tonnes) in the baseline.
Source of data	FAO data 2019
Value(s) applied	Wood: 2.76 Charcoal: 2.87
Choice of data or Measurement methods and procedures	Publically available credible evidence- FAO data 2019 ⁴
Purpose of data	Emissions reduction calculation
Additional comment	The parameter is used to calculate baseline emissions factor. In the case of a project activity, the baseline fuel use value for the project cooking device type and end user type in the region or country is fixed for the project for

⁴ <https://www.fao.org/3/cb1528en/cb1528en.pdf>

	the crediting period. It shall be reassessed at each crediting period renewal.
--	--

Data/parameter	$NCV_{b,i}$
Unit	Terrajoules (TJ)/tonne of fuel
Description	The net calorific value of the baseline fuel type i
Source of data	IPCC default data
Value(s) applied	Wood: 0.0156 Charcoal: 0.029
Choice of data or Measurement methods and procedures	IPCC default values- 2006 IPCC Guidelines for National Greenhouse Gas Inventories, Volume 2 – Energy, Chapter 1 – Introduction, Table 1.2 (pg 1.18 and 1.19)
Purpose of data	Emissions reduction calculation
Additional comment	N/A

Data/parameter	$EF_{b,i,CO2}$
Unit	tCO ₂ /TJ
Description	CO ₂ emission factor arising from use of fuels in baseline scenario
Source of data	Methodology values for wood and charcoal respectively
Value(s) applied	Wood: Methodology default, 112 tCO ₂ /TJ Charcoal: Methodology default, 112 tCO ₂ /TJ (combustion only)
Choice of data or Measurement methods and procedures	Methodology default value for this parameter

Purpose of data	Emissions reduction calculation
Additional comment	-

Data/parameter	$E_{Fb,i,non-CO2}$
Unit	tCO ₂ /TJ
Description	Non-CO ₂ emission factor arising from use of fuels in baseline scenario
Source of data	Methodology values for wood and charcoal respectively
Value(s) applied	Wood: Methodology default, 9.46 tCO ₂ e/TJ (AR5 GWP) Charcoal: Methodology default, 5.865 tCO ₂ e/TJ (AR5 GWP) (combustion only)
Choice of data or Measurement methods and procedures	Methodology default value for this parameter
Purpose of data	Emissions reduction calculation
Additional comment	-

Data/parameter	$\eta_{b,i,j}$
Unit	Fraction
Description	Energy efficiency of baseline device j with fuel i.
Source of data	Default value from methodology
Value(s) applied	Efficiency of three stone = 10% Efficiency of charcoal stove = 20%
Choice of data or Measurement methods and procedures	MECD default value.

Purpose of data	Emissions reduction calculation
Additional comment	The parameter is used to calculate baseline emissions factor

Data/parameter	Percentage of fuel_i
Unit	%
Description	Percentage of fuel type i in the baseline situation
Source of data	Public evidence ⁵
Value(s) applied	Wood: 50% Charcoal: 50%
Choice of data or Measurement methods and procedures	The percentage of households dependent on wood and charcoal for cooking in Zambia has been estimated through a public evidence ⁶ .
Purpose of data	Emissions reduction calculation
Additional comment	The parameter is used to calculate baseline emissions factor

Data/parameter	fNRBi,y
Unit	Fraction

Source of data	Determined by following the CDM TOOL30, Calculation of the fraction of non-renewable biomass
Value(s) applied	0.91
Choice of data or Measurement methods and procedures	Determined by following the CDM TOOL30, Calculation of the fraction of non-renewable biomass.
Purpose of data	Calculation of Baseline Emissions Factor/Baseline Emissions.
Additional comment	As applicable, NRB assessment may be used for multiple scenarios where woody biomass is used. Project developers applying for a renewal of the crediting period must reassess the NRB based on most recent information available.

Data/parameter	LEy
Unit	Fraction
Description	Net to Gross adjustment factor
Source of data	approved methodology
Value(s) applied	0.95
Choice of data or Measurement methods and procedures	Default value as prescribed by methodology applied
Purpose of data	Baseline Emission calculation
Additional comment	This parameter shall remain fixed for the crediting period.

B.6.3 Ex ante estimation of SDG Impact

SDG 13

Baseline emissions:

The project will use the following approach to calculate the baseline emissions which is in line with para 3.5.3 of the applied methodology.

Case 1: It is possible to determine the thermal efficiency of the project device and to know the useful energy that is being replaced. The baseline emissions shall be calculated from the total electric energy input used in the project scenario in year y , the energy ratio of the specific energy consumption of baseline device(s) and the project device, and the baseline emissions factor:

$$BE_y = EG_{p,useful,y} \times EF_{b,useful} \quad Eq. 3$$

Where:

- BE_y = Baseline emissions (tCO₂e) in the year y
- $EG_{p,useful,y}$ = The amount of useful energy applied in the project in year y (TJ)
- $EF_{b,useful}$ = Baseline emissions factor (tCO₂e per TJ of useful energy)

The useful project energy in year y shall be calculated as follows (Case 1):

$$EG_{p,useful,y} = \sum_d EG_{p,d,y} \times 0.0036 \times \eta_{p,d,y} \quad Eq. 6$$

Where:

- $EG_{p,d,y}$ = The amount of electricity used in the project scenario by device d in year y (MWh)
- 0.0036 = Factor to convert MWh to TJ
- $\eta_{p,d,y}$ = Energy efficiency of the project device, d in year y (fraction)
- d = Project device d

$$EG_{p, useful,y} = 1.68\text{MWh} \times 0.0036 \times 0.71 = 0.0042 \text{ TJ}$$

The baseline emission factor shall be determined applying the equation below (Case 1):

$$EF_{b,useful} = \sum_k \left(\sum_{i,j} P_{b,i,j} \times \text{Percentage of fuel}_i \times (EF_{b,i,CO2} \times fNRB_{i,y} + EF_{b,i,non-CO2}) \times NCV_{b,i} \right) \div \sum_k \left(\sum_{i,j} P_{b,i,j} \times \text{Percentage of fuel}_i \times NCV_{b,i} \times \eta_{b,i,j} \right) \quad \text{Eq. 1}$$

Where:

$EF_{b,useful}$	=	Baseline emissions factor (tCO ₂ e per TJ of useful energy)
$P_{b,i,j}$	=	Amount of baseline fuel i used in device j in the baseline (tonnes)
$EF_{b,i,CO2}$	=	CO ₂ Emission factor of the baseline fuel i (tCO ₂ e/TJ)
$EF_{b,i,non-CO2}$	=	Non-CO ₂ Emission factor of the baseline fuel i (tCO ₂ e/TJ)
$fNRB_{i,y}$	=	Non-renewability status of woody biomass fuel i during year y
$NCV_{b,i}$	=	The net calorific value of the baseline fuel type i (TJ/tonne)
$\eta_{b,i,j}$	=	Efficiency of baseline device j with fuel i (fraction)
$\text{Percentage of fuel}_i$	=	Percentage of fuel type i in the baseline situation (%).
k	=	Household k from the target population, where applicable
j	=	Baseline devices j
i	=	Baseline fuel i

Parameter	Value	Source
$P_{b,i,j}$	Wood: 2.76 Charcoal: 2.87	FAO data 2019
$NCV_{b,i}$	Wood: 0.0156 Charcoal: 0.029	Default value
$EF_{b,i,CO2}$	112	Default value

EF _{b,i,non-CO2}	Wood: 9.46 tCO ₂ e/TJ Charcoal: 5.865 tCO ₂ e/TJ	Default value	
$\eta_{b,i,j}$	Firewood: 10% Charcoal: 20%	Default value	
Percentage of fuel _i	Wood: 50% Charcoal: 50%	https://climatecompatiblegrowth.com/wp-content/uploads/Alternative-Energy-for-Cooking-in-Zambia_COP27-Policy-Brief.pdf	
fNR _{Bi,y}	Zambia: 0.91	Calculated	

EF_b useful = 2280.81 tCO₂/TJ

Therefore, BE_y = 9.304 tCO₂e

Project emissions:

As per para 3.6.2 of the applied methodology, where project devices use renewable energy, such as solar energy, there are no project emissions. Hence, the project emissions will be considered zero in this case, since it involves distribution of solar cookers.

Leakage emissions:

The leakage emissions (LE_y) shall be determined by applying a default adjustment factor of 0.95 to the emission reductions.

Emission reductions:

The emission reductions are calculated as follows:

$$ER_y = BE_y - PE_y - LE_y$$

Where:

ER_y = Emission reductions in year y (t CO₂e/yr)

BE_y = Baseline emissions in year y (t CO₂e/yr)

PE_y = Project emissions in year y (t CO₂e /yr)

LE_y = Leakage emissions in year y (t CO₂e /yr)

B.6.4 Summary of ex ante estimates of each SDG outcome

Year	Baseline estimate	Project estimate	Net benefit
Year 1	930	0	930
Year 2	4,652	0	4,652
Year 2	8,374	0	8,374
Year 4	9,304	0	9,304
Year 5	9,304	0	9,304
Total	32,565	0	32,565
Total number of crediting years	5		
Annual average over the crediting period	6,513	0	6,513

SDG 07

Target: The project will distribute around 1000 solar cookers in Zambia.

SDG 03

Target: The project will lead to 100% smoke reduction, 100% reduction in number of times visited to hospital, 0% incidence of respiratory diseases, 0% incidence of eye infection and 0% incidence of cough.

B.7. Monitoring plan

B.7.1 Data and parameters to be monitored

SDG 13

Data / Parameter	$\eta_{p,d,y}$
Unit	Fraction

Description	Thermal Efficiency of project device
Source of data	Certified Efficiency Certificate – Lappeenranta University of Technology (Certificate provided)
Value(s) applied	71%
Measurement methods and procedures	Certified Efficiency Certificate – Lappeenranta University of Technology (Certificate provided)
Monitoring frequency	Recorded at the time of commissioning/distribution; a default schedule of linear decrease in efficiency down to the terminal efficiency (efficiency at end of technical life), which must be demonstrated to be 40% or higher, may be applied through the technical life span of the project device For modern electric cooking devices, thermal efficiency is expected to be consistent over the technical life span of the product. In this case, an annual decrease of 0% is assumed for the determination of useful energy across the product life span.
QA/QC procedures	-
Purpose of data	To verify emissions reduction from usage of the solar cook stove
Additional comment	-

Data / Parameter	$E_{Gp,d,y}$
Unit	MWh
Description	The amount of energy used in the project scenario by device d in year y (MWh)
Source of data	Direct and continuous measurement of usage of the cooker using the hour counter meter installed in the solar cooker
Value(s) applied	14000W per solar cooker
Measurement methods and procedures	Direct, continuous measurement through data logger, analog or digital meters.
Monitoring frequency	Continuously, aggregated monthly

QA/QC procedures	Data logger, analog or digital meters that are either in-built or attached separately to the electric cooking appliances to measure the electricity consumption of the electric cooking appliance(s) shall be in conformity with industry standard and manufacturer calibrated. It is the responsibility from manufacturer to provided calibrated equipment and evidence of the calibration. In case of damage or measurement errors, the equipment shall be replaced.
Purpose of data	Emissions reduction calculation from usage of the solar cook stove.
Additional comment	-

SDG 3

Data / Parameter	Air Quality
Unit	Qualitative (%)
Description	Users' perception on smoke reduction and Incidence of disease : perceived smoke levels, incidence of coughing, incidence of respiratory illness, Incidence of itchy eyes
Source of data	Sampling Surveys/ Annual usage survey/Monitoring survey
Value(s) applied	To be monitored
Measurement methods and procedures	Air quality will be assess through users interviews during the solar cooker User Survey. Observations as to inside/outside cooking area to confirm answers. During the survey HH users will be interviewed for the number of diseases caused by the smoke and also the number of times they (HH) visit hospitals for treatment related to breathing problems in the monitoring year.
Monitoring frequency	Annually
QA/QC procedures	
Purpose of data	Sustainable Development Assessment.
Additional comment	-

SDG 7

Data / Parameter	Access to affordable and clean energy services
Unit	Numbers
Description	Number of solar cookers under the project
Source of data	Commissioning records

Value(s) applied	To be monitored
Measurement methods and procedures	Sample survey to confirm if project solar cookers are operational. Operational status will confirm that the users are accessed to affordable and clean energy
Monitoring frequency	Annually
QA/QC procedures	N/A
Purpose of data	Sustainable Development Assessment.
Additional comment	-

B.7.2 Sampling plan

A statistically valid sample can be used to determine parameter values, as per the relevant requirements for sampling in the "Methodology for Sampling and surveys for CDM project activities and programme of activities." Minimum 90% confidence interval and a 10% margin of error requirement shall be achieved for the sampled parameters. In any case, for proportion parameter values, a minimum sample size of 30, or the whole group size if this is lower than 30, must always be applied. The sampling plan for induction cookstove will be as per the applied methodology i.e., 90% confidence rule (Lower bound of the one-sided 90% confidence interval). This option allows to obtain a result even if 90/30 precision is not achieved, although in a similar manner to the 90/30 rule, a minimum sample size of 30 is recommended. This approach is used when the 90/30 rule forces a sample size which is difficult to implement in practice. This estimate is very conservative, and it will probably be worthwhile to augment the sample size instead in cases when augmentation is practically possible.

- i. **Target Population:** The target population for different parameters discussed in the table above are given below:
 - For the proportional parameter, the target population is the solar cooker users listed in the project database.
 - For the mean value parameter, the target population is the total number of operational solar cooker users for which the emission reductions will be accounted for the monitoring period in question. The mean value parameter, unless and otherwise required by the estimated number of samples (if it is greater than the sample estimate for the proportional parameter) will be the subset of the operational solar cooker users as identified during the annual monitoring surveys.
- ii. **Sampling frame:** All the households availed with the solar cookers by the project will be the sampling frame.

iii. **Sampling Method:** A simple random sampling will be adopted for estimating the sample size for the monitoring surveys. Simple random sampling is suited to populations that are homogenous (EB 110 annex 01). From the population of solar cookers, the random numbers will be assigned for each solar cooker using excel function and the sample solar cooker will be extracted accordingly. The schema of the sampling method is given below:

iv. **Sample Size:**

The calculation of the required sample size for each parameter will be calculated at 90/10 confidence/precision as required for the annual monitoring. The sample size is determined using the Guidelines for Sampling and Surveys for CDM Project activities and Programme of Activities Ver. 4.0 (EB86, Annex 4)⁷. For annual surveys, the level of precision of 10% and a confidence level of 90% will be assessed for the monitoring parameters.

The minimum sample size to be determined using the procedure outlined in para 12 of appendix 1, EB 86 Annex 4, Guidelines for Sampling and Surveys for CDM Project activities and Programme of Activities Ver. 4.0.

$$n \geq \frac{1.645^2 N \times p(1 - p)}{(N - 1) \times 0.1^2 \times p^2 + 1.645^2 p(1 - p)}$$

Where:

n= Sample size

N = Total number of solar cooker of type *i* installed under the project

p = expected proportion (0.5)⁸

1.645 = represents the 90% confidence required

0.1 = represents the 10% relative precision (0.1x0.5=0.05 = 5% points either side of p)

Substituting the values of "N" in equation above, the sample size will be deducted.

⁷Guidelines for Sampling and Surveys for CDM Project activities and Programme of Activities Ver. 4.0 (EB 86, Annex 4)

⁸The expected proportion has been taken as 0.5 for the first monitoring period. For the successive monitoring periods, the sample size will be deducted in accordance with the monitoring results of the first monitoring period.

(a) Data:

(i) Field Measurements:

1. Checking of a representative sample of each solar cooker installed every year to ensure that they are still operating.
2. Determination of the efficiency of a representative sample of each type of solar cooker either using field measurement or other approach given in the methodology.
3. The replaced low efficiency appliances are disposed of and not used within the boundary
4. The survey will be conducted annually with the objective to target 10 percent precision and to achieve 90 percent confidence.

(ii) Quality Assurance/Quality Control:

A survey questionnaire will be prepared to seek responses of operating status (yes or no) of solar cooker units using households. The survey will be performed by the project developer.

(iii) Analysis:

1. Checking of a representative sample of solar cooker installed every year to ensure that they are still operating
2. Determination of the efficiency of a representative sample of all devices
3. The replaced low efficiency appliances are disposed of and not used within the boundary;

The PP will collect, compile and analyze the data to derive the number of solar cooker disseminated, the percentage of solar cooker in operation, displacement of traditional cooking stove by solar cooker users. The developer will prepare "monitoring report" based on the survey report.

The data collected will be compiled in Excel sheets and/or other software and analyzed to derive the percentage of solar cooker in operation.

(b) Implementation:

The survey questionnaire will be prepared, pre-tested and field personnel will be trained in conducting the survey to ensure the quality of data collected and the survey will be carried out once a year. The schedule for implementing the sampling effort shall be defined prior to the field activity.

B.7.3 Other elements of monitoring plan

A. Unique numbering system

Each solar cooker has a unique identification number placed on it.

B. Meter devise

Each solar cooker has an hour counter/ meter that shows the number of hours used for cooking.

C. Stove Readings Excel sheet

On a monthly basis, stove readings are recorded in an Excel sheet on the project database.

A monitoring framework was developed to collect solar cooker stove user data on a monthly basis. This data will be used for carbon accounting for the carbon credit verification. The Community Liaison Officer employed by Afstor is based at the project site and is responsible for monitoring the usage, collecting monthly stove readings; and also give feedback on how the solar cooker is working to the project team at headquarters. The project Technician conducts quarterly performance check-ups to ensure that the solar cooker is working well and he will repair or attend to any faults that may be reported by the Users. The data that is collected monthly in a data sheet is sent to Afstor for reference.

SECTION C. DURATION AND CREDITING PERIOD

C.1. Duration of project

C.1.1 Start date of project

03/05/2021

C.1.2 Expected operational lifetime of project

20 years

C.2. Crediting period of project

C.2.1 Start date of crediting period

03/05/2021

C.2.2 Total length of crediting period

5 years renewable

SECTION D. SUMMARY OF SAFEGUARDING PRINCIPLES AND GENDER SENSITIVE ASSESSMENT

D.1 Safeguarding Principles that will be monitored

A completed Safeguarding Principles Assessment is in [Appendix 1](#), ongoing monitoring is summarised below.

PRINCIPLES	MITIGATION MEASURES ADDED TO THE MONITORING PLAN
Principle 1, Human Rights	Not Applicable
Principle 2, Gender Equality and women's right	Not Applicable
Principle 3, Community Health, Safety and Working Conditions	Not Applicable
Principle 4, Cultural Heritage, Indigenous Peoples, Displacement and Resettlement	
1.Sites of Cultural and Historical Heritage	Not Applicable
2.Forced Eviction and Displacement	
3.Land Tenure and Other Rights	
4.Indigenous Peoples	
Principle 5, Corruption	Not Applicable
Principle 6, Economic Impacts	
1. Labour Rights	Not Applicable
2. Negative Economic Consequences	

Principle 7, Climate and Energy

- | | |
|------------------|----------------|
| 1. Emissions | Not Applicable |
| 2. Energy Supply | |
-

Principle 8, Water

- | | |
|--|----------------|
| 1. Impact on Natural Water
Patterns/Flows | Not Applicable |
| 2. Erosion and/or Water Body Instability | |
-

Principle 9, Environment, ecology and land use

- | | |
|--|----------------|
| 1. Landscape Modification and Soil | |
| 2. Vulnerability to Natural Disaster | |
| 3. Genetic Resources | |
| 4. Release of pollutants | |
| 5. Hazardous and Non-hazardous Waste | Not Applicable |
| 6. Pesticides & Fertilisers | |
| 7. Harvesting of Forests | |
| 8. Food | |
| 9. Animal husbandry | |
| 10. High Conservation Value Areas and
Critical Habitats | |
| 11. Endangered Species | |
-

D.2. Assessment that project complies with GS4GG Gender Sensitive requirements

Question 1 - Explain how the project reflects the key issues and requirements of Gender Sensitive design and implementation as outlined in the Gender Policy?	The project promotes gender equality and the empowerment of women. The project fully supports women participation. There is 70/30 participation for both men and women. The project has taken a women first approach in its implementation
---	--

Question 2 - Explain how the project aligns with existing country policies, strategies and best practices	The project is aligned with the Vision 2030, the National Climate Change Policy (2016), the National Energy Policy (2019) and the Gender Equity and Equality Act (2015). The project aligns with this policy by providing practical benefits to women who use the clean solar stoves (see above), but also by directly dealing with women as main and fully responsible beneficiaries, thereby fully respecting women's equal rights and economic independence.
Question 3 - Is an Expert required for the Gender Safeguarding Principles & Requirements?	NO, the project has two staff members that are well vested and informed in Gender issues. All the gender safeguarding principles and requirements are carefully assessed and an expert is not required
Question 4 - Is an Expert required to assist with Gender issues at the Stakeholder Consultation?	The project team responsible for organizing the stakeholder consultation meeting did ensure the gender representation at the meeting. So, no expert is required

SECTION E. SUMMARY OF LOCAL STAKEHOLDER CONSULTATION

The below is a summary of the 2 step GS4GG Consultation for monitoring purposes. Please refer to the separate Stakeholder Consultation Report for a complete report on the initial consultation and stakeholder feedback round.

E.1 Summary of stakeholder mitigation measures

The stakeholder consultation meeting was held in accordance with the GS4GG Stakeholder procedure requirements and Guidelines. The meeting was held in Monze district, Southern province on 3rd December 2020. The participants included community members that received the solar cookers during the pilot phase and Stakeholder

feedback from the consultation was got via Group work. The participants were divided into three groups comprising of government, community members, local NGOs, private sector. Gender balance was observed. Participants in the groups were asked to give their feedback on the project summary presentation and the presentation on the social, economic and environmental impacts of the project. They were asked to give feedback in the language they were most comfortable with. The stakeholder feedback was presented by a group representative chosen by the group and after each group presentation, a plenary discussion was made and key points from the discussion were noted. At the end of all the group presentations, a summary of the stakeholder feedback was made. A continuous feedback mechanism with the different stakeholders was agreed upon in line with nature of the project.

So far there are no immediate negative impacts of the project as the solar cooker only uses solar panels installed on the roof and solar energy. It does not require the users to alter their livelihoods in any way. Most stakeholder feedback on sustainability model, mechanism for data collection have been developed and are in place. A project monitoring framework has also been developed. A follow up Review meeting in clusters at community level were also held in October 2021. A third Review meeting with government and other stakeholders will be held before end of 2021.

A round 2 stakeholder feedback meeting was held 10th May, 2023 in Monze. The participants included community members who are the project beneficiaries, local government officials and Heads of government departments (Forestry, Fisheries & Livestock, Agriculture, Traditional leaders and other NGOs working in the project area.

E.2 Final continuous input / grievance mechanism

METHOD	INCLUDE ALL DETAILS OF CHOSEN METHOD (S) SO THAT THEY MAY BE UNDERSTOOD AND, WHERE RELEVANT, USED BY READERS.
Continuous Input / Grievance Expression Process Book (mandatory)	As this is a community-based project the meeting agreed that any continuous input or any grievance mechanisms will be through the identified focal person (Community Liaison Officer, employed by Afstor) in each community in the project area that is a beneficiary of the solar cooker. The focal person will have a book where she will record all names and grievances and continuous feedback. She will then be sharing this information with the project management team. This information is passed on to the project management team on a monthly basis.
GS Contact (mandatory)	help@goldstandard.org
Other	N/A

APPENDIX 1 - SAFEGUARDING PRINCIPLES ASSESSMENT

Complete the Assessment below and copy all Mitigation Measures for each Principle into [SECTION D](#) above. Please refer to the instructions in the [Guide to Completing](#) this Form.

SOCIAL SAFEGUARDING PRINCIPLES		
Reference requirement	Question	Response
ERROR! REFERENCE SOURCE NOT FOUND.ERROR! REFERENCE SOURCE NOT FOUND.		
ERROR! REFERENCE SOURCE NOT FOUND.	Does the project developer, its representatives and the Project disrespect internationally proclaimed human rights?	☐ YES ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	Is the project involved or complicit in violence or human rights abuses of any kind as defined in the Universal Declaration of Human Rights?	☐ YES ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	Have local communities or individuals raised human rights concerns regarding the project (e.g., during the stakeholder engagement process, grievance processes, public statements)?	☐ YES ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	Is there a risk that rights-holders (e.g., Project-affected stakeholders) do not have the capacity to claim their rights?	☐ YES ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	Does this project undermine national or regional measures for the realisation of the right to development?	☐ YES ☒ NO
If the answer to any of the questions above is "yes," please explain the reason and how the project will ensure compliance with applicable requirements. Please add text here...		
Would the project potentially involve or lead to:		
ERROR! REFERENCE SOURCE NOT FOUND.	adverse impacts on enjoyment of the human rights (civil, political, economic, social or cultural) of the affected population and particularly of marginalised groups?	☐ YES ☐ POTENTIALLY ☒ NO

ERROR! REFERENCE SOURCE NOT FOUND.	inequitable or discriminatory impacts on affected populations, particularly people living in poverty or marginalised or excluded individuals or groups, including persons with disabilities?	☐ YES ☐ POTENTIALLY ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	restrictions in availability, quality of and/or access to resources or basic services, in particular to marginalised individuals or groups, including persons with disabilities?	☐ YES ☐ POTENTIALLY ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	exacerbation of conflicts among and/or the risk of violence to project-affected communities and individuals?	☐ YES ☐ POTENTIALLY ☒ NO

Briefly describe below how the project incorporates a human rights-based approach.

For example, by describing how the project design:

- is informed by human rights analysis, including from UN human rights mechanisms (human rights treaty bodies, universal periodic review, special procedures)
- includes measures to assist the government to realise (respect, protect and fulfil) human rights under international law and to implement human rights-related standards in national law (whichever is higher)
- enhances the availability, accessibility and quality of benefits and services for potentially marginalised individuals and groups, and to increase their inclusion in decision-making processes that may impact them (consistent with the non-discrimination and equality human rights principle)
- provides reasonable accommodations to strengthen inclusivity and accessibility of project benefits and services to persons with disabilities.

Please add text here....

The project recognises the centrality of human rights and supports “universal respect for, and observance of, human rights and fundamental Freedoms for all”.

The project does not discriminate with regards to participation and inclusion.

ERROR! REFERENCE SOURCE NOT FOUND. ERROR! REFERENCE SOURCE NOT FOUND.

ERROR! REFERENCE SOURCE NOT FOUND.	Have women’s groups/leaders raised gender equality concerns regarding the project, (e.g., during the stakeholder engagement process, grievance processes, public statements)?	☐ YES ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	Does the project undermine the principles of non-discrimination, equal treatment, and equal pay for equal work?	☐ YES ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	Does the project prevent men and women from having equal opportunities to participate in identified tasks and activities, whether through paid work, volunteer work, or community contributions, as appropriate?	☐ YES ☒ NO

ERROR! REFERENCE SOURCE NOT FOUND.	Does the project limit the participation of women or men based on pregnancy, maternity/paternity leave, or marital status?	☐ YES ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	Is information about project objectives being communicated in a way that is inappropriate for the local context and not tailored to the methods of understanding of both women and men, which could hinder their participation?	☐ YES ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	Has the project assessed gender risks without referencing the country's gender strategy or equivalent national commitment?	☐ YES ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	Has expert stakeholder(s) been involved, and has their input been requested for the project design on gender equality and women's empowerment?	☐ YES ☒ NO
If the answer to any of the questions above is "yes," please explain the reason and how the project will ensure compliance with applicable requirements. Please add text here....		
Would the project potentially involve or lead to:		
ERROR! REFERENCE SOURCE NOT FOUND.	adverse impacts on gender equality and/or the situation of women and girls?	☐ YES ☐ POTENTIALLY ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	exacerbation of risks of gender-based violence? For example, through the influx of workers to a community, changes in community and household power dynamics, increased exposure to unsafe public places and/or transport, etc.	☐ YES ☐ POTENTIALLY ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	reproducing discriminations against women based on gender, especially regarding participation in design and implementation or access to opportunities and benefits?	☐ YES ☐ POTENTIALLY ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	limitations on women's ability to use, develop and protect natural resources, taking into account different roles and positions of women and men in accessing environmental goods and services? For example, activities that could lead to natural resources degradation or depletion in communities who depend on these resources for their livelihoods and well-being.	☐ YES ☐ POTENTIALLY ☒ NO

Briefly describe below how the project is addressing any identified risk to gender equality and women's empowerment.

Please add text here....

The project has taken a women first approach in its implementation, therefore, no risk to gender equality & women's empowerment.

ERROR! REFERENCE SOURCE NOT FOUND.ERROR! REFERENCE SOURCE NOT FOUND.

ERROR! REFERENCE SOURCE NOT FOUND.	Does the project involve potential risks to the health and safety of affected communities during its life cycle?	☐ YES ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	Does the project involve any potential risks to the workers' safety and health?	☐ YES ☒ NO

If the answer to any of the questions above is "yes," please explain the reason and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project potentially involve or lead to:

ERROR! REFERENCE SOURCE NOT FOUND.	construction and/or infrastructure development (e.g., roads, buildings, dams)?	☐ YES ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	air pollution, noise, vibration, traffic, injuries, physical hazards, poor surface water quality due to runoff, erosion, sanitation?	☐ YES ☐ POTENTIALLY ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	harm or losses due to failure of structural elements of the project (e.g., collapse of buildings or infrastructure)?	☐ YES ☐ POTENTIALLY ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	risks of water-borne or other vector-borne diseases (e.g., temporary breeding habitats), communicable and noncommunicable diseases, nutritional disorders, mental health?	☐ YES ☐ POTENTIALLY ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	transport, storage, and use and/or disposal of hazardous or dangerous materials (e.g., explosives, fuel and other chemicals during construction and operation)?	☐ YES ☐ POTENTIALLY ☒ NO

NOT FOUND.		
ERROR! REFERENCE SOURCE NOT FOUND.	adverse impacts on ecosystems and ecosystem services relevant to communities' health (e.g., food, surface water purification, natural buffers from flooding)?	☐ YES ☐ POTENTIALLY ☒ NO
Briefly describe below how the project is addressing any identified risk related to community health and safety.		
The solar cooker does not produce any hazardous substances like smoke and is very safe to use. The design of the solar cooker ensures the safety of the users and only uses solar energy.		
ERROR! REFERENCE SOURCE NOT FOUND.ERROR! REFERENCE SOURCE NOT FOUND.		
ERROR! REFERENCE SOURCE NOT FOUND.ERROR! REFERENCE SOURCE NOT FOUND.		
ERROR! REFERENCE SOURCE NOT FOUND.	Does the project involve altering, damaging, or removing sites, objects, or structures of significant cultural heritage?	☐ YES ☒ NO
If the answer to question above is "yes," please explain the reason and how the project will ensure compliance with applicable requirements.

ERROR! REFERENCE	If answer to above question is "yes", does the project have any risks that could negatively impact the catchment, project success, and surrounding HCV and ecological assets,	☐ YES ☐ NO

<u>SOURCE NOT FOUND.</u>	as well as any measurable adverse impacts on the criteria or biodiversity values for which the critical habitat was designated, and on the ecological processes supporting that biodiversity?	☒ NA
<u>ERROR! REFERENCE SOURCE NOT FOUND.</u>	If answer to above question is "yes", is a robust, appropriately designed, and long-term Habitats and Biodiversity Action Plan absent which will make the project unable to achieve net gains of those biodiversity values for which the critical habitat was designated?	☐ YES ☐ NO ☒ N/A
<u>ERROR! REFERENCE SOURCE NOT FOUND.</u>	Does the project area or area of downstream impacts have native tree patches, individual native trees, freshwater resources (including rivers, lakes, swamps, temporary water bodies, and wells), habitats of rare, threatened, and endangered species, and biodiversity-enhancing areas?	☐ YES ☐ POTENTIALLY ☒ NO
<u>ERROR! REFERENCE SOURCE NOT FOUND.</u>	If the answer to the above question is "yes", will the project have any adverse effects on these areas?	☐ YES ☐ No ☒ NA
<u>ERROR! REFERENCE SOURCE NOT FOUND.</u>	If the answer to above question is "yes", does the project has opportunities to minimise unwarranted conversion or degradation of the habitat and to enhance the habitat as part of its development?	☐ YES ☐ No ☒ NA
<u>ERROR! REFERENCE SOURCE NOT FOUND.</u>	Is the project applying Land Use & Forest Activity Requirements and managing a minimum 10% of the project area to protect or enhance the biological diversity of native ecosystems following HCV approach as per the given requirements?	☐ YES ☒ No ☐ NA
<u>ERROR! REFERENCE SOURCE NOT FOUND.</u>	Are opinions and recommendations of an Expert Stakeholder(s) not sought and demonstrated as being included in the project design?	☐ YES ☐ NO ☒ NA

If the answer is "yes" or "potentially" to any of the above question, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

ERROR! REFERENCE SOURCE NOT FOUND.ERROR! REFERENCE SOURCE NOT FOUND.

<u>ERROR! REFERENCE SOURCE NOT FOUND.</u>	Does the project lead to the reduction or negative impact on any recognised Endangered, Vulnerable or Critically Endangered species?	☐ YES ☒ NO
--	--	--

If the answer to question above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project involve or lead to:

<u>ERROR!</u> <u>REFERENCE</u> <u>SOURCE</u> <u>NOT</u> <u>FOUND.</u>	distortion of habitats of endangered species?	☐ YES ☐ POTENTIALLY ☒ NA
<u>ERROR!</u> <u>REFERENCE</u> <u>SOURCE</u> <u>NOT</u> <u>FOUND.</u>	If answer to the above question is "yes", does the project plan to protect and enhance them?	☐ YES ☐ POTENTIALLY ☐ NO ☒ N/A
<u>ERROR!</u> <u>REFERENCE</u> <u>SOURCE</u> <u>NOT</u> <u>FOUND.</u>	Are opinions and recommendations of an Expert Stakeholder(s) not sought and demonstrated as being included in the project design?	☐ YES ☐ NO ☒ NA

If the answer is "yes" or "potentially" to any of the above question, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

Please add text here....

ERROR! REFERENCE SOURCE NOT FOUND.ERROR! REFERENCE SOURCE NOT FOUND.

<u>ERROR!</u> <u>REFERENCE</u> <u>SOURCE</u> <u>NOT</u> <u>FOUND.</u>	Does project introduce any alien species (not currently established in the country or region of the project) into new environments?	☐ YES ☒ NO
--	---	--

If the answer to question above is "yes," please explain project situation and how the project will ensure compliance with applicable requirements.

Please add text here....

Would the project involve or lead to:

<u>ERROR!</u> <u>REFERENCE</u> <u>SOURCE</u> <u>NOT</u> <u>FOUND.</u>	risk of introducing any alien species with a high risk of invasive behaviour regardless of whether such introductions are permitted under the existing regulatory framework?	☐ YES ☐ POTENTIALLY ☒ NO
--	--	--

ERROR! REFERENCE SOURCE NOT FOUND.	risk of potential accidental or unintended introductions including the transportation of substrates and vectors (such as soil, ballast, and plant materials) that may harbour alien species.	☐ YES ☐ POTENTIALLY ☒ NO
ERROR! REFERENCE SOURCE NOT FOUND.	risk of spreading alien species into areas in which they have not already been established?	☐ YES ☐ POTENTIALLY ☒ NO

If the answer is "yes" or "potentially" to any of the above question, please provide a brief description of the project situation below. Also, provide justification and/or evidence as necessary to demonstrate compliance with applicable requirements.

APPENDIX 2 - CONTACT INFORMATION OF PROJECT DEVELOPER(S)

Organization name	Afstor Oy
Registration number with relevant authority	FI 2841899-4
Street/P.O. Box	Tuotantokatu 2
Building	
City	Lappeenranta
State/Region	Etelä-Karjala
Postcode	53850
Country	Finland
Telephone	+358 50 5700 952
E-mail	vesa.korhonen@afstor.com
Website	www.afstor.com
Contact person	Vesa Juhani Korhonen
Title	Director- Business Development
Salutation	Mr.
Last name	Korhonen
Middle name	Juhani
First name	Vesa
Department	Business Development
Mobile	+358 50 5700 952
Direct tel.	+358 50 5700 952
Personal e-mail	vesaj.korhonen@gmail.com

APPENDIX 3 - LUF ADDITIONAL INFORMATION

Risk of change to the Project Area during Project Certification Period:	N/A
Risk of change to the Project activities during Project Certification Period:	N/A
Land-use history and current status of Project Area:	N/A
Socio-Economic history:	N/A
Forest management applied (past and future)	N/A
Forest characteristics (including main tree species planted)	N/A
Main social impacts (risks and benefits)	N/A
Main environmental impacts (risks and benefits)	N/A
Financial structure	N/A
Infrastructure (roads/houses etc):	N/A
Water bodies:	N/A
Sites with special significance for indigenous people and local communities - resulting from the Stakeholder Consultation:	N/A
Where indigenous people and local communities are situated:	N/A
Where indigenous people and local communities have legal rights, customary rights or sites with special cultural, ecological, economic, religious or spiritual significance:	N/A

APPENDIX 4 - DESIGN CHANGES

A4.1. Details of proposed or actual design change

N/A as no designed changes have been required.

A4.2. Describe the impacts of design change on the following

a. Additionality

N/A

b. Applicability of methodology and other methodological regulatory documents with which the project activity has been certified

N/A

c. Compliance with the monitoring plan of the applied methodology

>> *N/A*

d. Level of accuracy and completeness in the monitoring of the project activity compared with the requirements contained in the registered monitoring plan

>> *N/A*

e. Scale of the project activity

>> *N/A*

f. Stakeholder consultation

>> *N/A*

g. Sustainable development criteria

>> *N/A*

h. Safeguarding assessment

>> *N/A*

i. Compliance with applicable legislation

>> N/A

- j. **Only for LUF Projects:** Transparent summary of all approved changes in Project Area, Eligible Area and accompanying changes in ex-ante emissions removals.

DATE OF APPROVED DESIGN CHANGE (MM/DD/YYYY)	PROJECT AREA (HA)		ELIGIBLE AREA (HA)		EX-ANTE ESTIMATE (TCO2E)	
	INCREASE OR DECREASE ?	VALUE (HA)	INCREASE OR DECREASE?	VALUE (HA)	INCREASE OR DECREASE ?	PERCENTAGE (%)
N/A						
N/A						

Revision History

Version	Date	Remarks
1.5	29 June 2023	Editorial changes to match V2.1 of the Safeguarding Principles Requirements
1.4	21 June 2023	Editorial changes to match V2.0 of the Safeguarding Principles Requirements
1.3	14 April 2023	Integrated the design change memo as annex of the document. Editorial changes
1.2	14 October 2020	Hyperlinked section summary to enable quick access to key sections Improved clarity on Key Project Information Inclusion criteria table added Gender sensitive requirements added Prior consideration (1 yr rule) and Ongoing Financial Need added Safeguard Principles Assessment as annex and a new section to include applicable safeguards for clarity Improved Clarity on SDG contribution/SDG Impact term used throughout Clarity on Stakeholder Consultation information required Provision of an accompanying Guide to help the user understand detailed rules and requirements
1.1	24 August 2017	Updated to include section A.8 on 'gender sensitive' requirements
1.0	10 July 2017	Initial adoption
