SECTION A. General description of PoA

A.1. Purpose and general description of the PoA

This Gold Standard Microscale Program of Activities plans to replace traditional cookstoves with ECS's clean cooking system based on gasifier cookstoves and biomass pellets, or with other, similar technologies such as ethanol stoves or electric induction stoves. It thereby aims at reducing greenhouse gas emissions and providing better living conditions at households, especially improving the health of women and children by reducing indoor air pollution. This will be pursued by the replacement of traditional cooking, with a focus on replacing charcoal which is responsible for deforestation and indoor pollution all over Africa. Clean cooking systems and fuels (besides electricity, if applicable) will be distributed directly through VPA implementers, and users will be in constant contact with VPA implementers to monitor fuel consumption.

In the baseline situation, targeted users predominantly cook with charcoal on conventional charcoal stoves. There are already existing users of micro gasifier stoves distributed by the CME in Zambia. However, all users under this PoA will be new users joining after 07/04/2022.

Emerging Cooking Solutions Sweden AB (ECS) will be the Coordinating and Managing Entity (CME) of the PoA. Its vision is to help low-income families leapfrog old technologies such as firewood and charcoal for cooking into the new world of clean, healthy, affordable, renewable and modern cooking.

Policy/measure or stated goal that the PoA seeks to promote

The PoA will promote advanced clean cooking Solutions in Africa, such as micro gasification stoves consuming biomass pellets, ethanol stoves or electric induction stoves. Cooking technologies under this PoA will be more advanced than conventional efficient wood stoves. They will be significantly more efficient (>40% thermal efficiency) and allow for greater cooking comfort, such as the clean flame, comparable to a LPG flame, generated by micro gasification stoves.

Framework for the implementation of the proposed PoA

The PoA is a voluntary initiative of ECS, who will act as a Coordinating and Managing Entity (CME). ECS will either implement VPAs itself or cooperate with other partners in various states for disseminating and monitoring the performance of the selected

technologies. The carbon certification work and communication with implementing partners will be managed by the CME. The carbon revenue generated by the PoA will be used to cover the technology subsidy, implementation and monitoring cost at PoA and VPA level.

A.2. Physical/ Geographical boundary of the PoA

The boundaries of the PoA are identical to the boundaries of the host countries of the countries included.

Since the first VPA is situated in Zambia, the boundaries initially correspond to the boundaries of the Republic of Zambia. The geographical coordinates of the host country are -15°'24' 24"08" S; 28°'17' 13"67" E (Lusaka) . The geographical boundaries are shown below.

The PoA is planned as a multi-country PoA. Its geographical scope is planned to be expanded to more countries in the future, focusing on Africa, but not excluding the rest of the world. If other countries are added, further information will be provided accordingly. There are potential VPAs planned in Kenya, Malawi, Mozambique and Uganda, but also other countries will probably be considered.

A.3. Technologies/measures and eligibility under Gold Standard

The PoA will implement advanced and efficient cooking technologies. A focus is set on micro gasifiers based on pellets, such as the Mimi Moto stove (designed in the Netherlands and manufactured in China) and the "fourth Generation" advance pellet stove, made by ECS which is currently entering the market. More advanced models may be used at a later time under the PoA. The PoA is also open to other stove technologies such as ethanol stoves or electric induction stoves.

The thermal efficiency of selected technologies will always be more than 40%.

An example for technologies distributed is the Mimi Moto stove (<https://mimimoto.nl/>)

Eligibility criteria as per section 3.1.1 of GS4GG Principles & Requirements

(a) Type of Project

As per section 4.1.3 of GS4GG Principles & Requirements, v1.2, a project type is automatically eligible for Gold Standard Certification if there are approved Gold Standard Activity Requirements and/or Gold Standard Impact Quantification Methodologies associated with it or as referenced in Gold Standard Product Requirements.

Since the VPAs under the PoA will introduce energy efficient cooking at household level, the PoA falls under project type category b) as defined in the GS Community service Activity requirements²: End-use energy efficiency

Hence, the PoA is automatically eligible for gold standard certification.

(b) Location of Project

All the VPAs under the PoA will be located within a host country in Africa, and possibly also in another continent. This is eligible as per the GS4GG eligibility requirements the projects can be located in any part of world.

² [Community Services Activity Requirements – Gold Standard for the Global Goals](#)

(c) Project area, Project Boundary & Scale

Project Area & Boundary

The project boundary comprises the physical, geographical sites of the project technology (improved cook-stoves) and baseline and project fuel collection and production, in accordance with the methodology “Reduced Emission from Cooking and Heating” (RECH) V4.0, as referenced in MECD par. 3.1. The project boundary will be clearly defined in every VPAs under the PoA.

Project Scale

The PoA is a micro scale PoA. Each VPAs under the PoA will be micro-scale projects and generate less than the threshold of 10,000 tCO₂ emission reduction annually

Double counting

The VPAs under the PoA will not be included in any other voluntary or compliance standards programme unless approved by Gold Standard. Each VPA will ensure that double counting of emission reductions is avoided, through the unique identification of each project device with a unique identification number.

Hence, there will not be any double counting of carbon credits.

(d) Host Country Requirements

No legal, environmental, ecological and social regulations in Zambia or another African country prevent the implementation of improved cook stoves in private households. Hence, the VPAs under the PoA will be in compliance with Host Country’s legal, environmental, ecological and social regulations.

(e) Contact Details

Name	Emerging Cooking Solutions Sweden AB (ECS)
Contact Details	Scheelevagen 15 223 70 Lund, Sweden
Legal Registration Details	Registration number: 556890-4766 Date of registration: 22 May 2012

Justification on the Entity is in good standing	No insolvency or legal/criminal notices filed against ECS or any of its Directors.
---	--

(f) Legal Ownership

In any VPAs under the PoA, the project devices (Improved Cook Stoves) will be provided by ECS and/or local implementing agencies at a subsidized rate. The expected GS VERs and potential social benefit entitlements will be with ECS or VPA implementors, for which users will sign a carbon right transfer agreement with each user/beneficiary along with project details.

(g) Other Rights

Except the Social benefits and VERs, all other legal rights of the project devices are with the beneficiaries. Ownership may however stay with VPA implementers as long as the devices have not been fully paid.

(h) ODA Declaration

No VPA under the PoA will make use of public funding from Annex I parties that could result in a diversion of official development assistance. This will be confirmed in each VPA included in the POA.

Eligibility criteria as per GS4GG Community Services Activity Requirements

No. (paragraph of CSA requirements)	Eligibility Criterion	Demonstration of eligibility of VPAs and the PoA
2.1.2	CSA Projects shall lead to climate change mitigation and/or adaptation by providing or improving access to services/resources at household or community or institution level. Eligible services include electricity and energy, water and sanitation, waste management, housing, etc.	VPAs under the PoA distribute improved cookstoves to households, therefore providing (improved) energy services. See VPA inclusion criterion No. 4 (technology).
2.1.3	In relation to the above all Projects shall therefore conform to Gold	Conformity with the GS4GG Principles &

	Standard for the Global Goals Principles & Requirements (and associated documents).	Requirements is discussed above.
3.1.1 (b)	Types of project – Pre-identified CSA project types are noted below. Project Developers may submit new project types to Gold Standard for approval following the Principles & Requirements. (a) ... (b) End- Use Energy efficiency: Project activities that reduce energy requirements as compared to baseline scenario without affecting the level and quality of services or products, where the end user of the products and services are clearly identified and when the physical intervention is required at the user end. For example, efficient cooking, heating, lighting, etc. (c) ...	See previous criterion No. 2.1.2 above and VPA inclusion criterion No. 4 (technology), showing that End-Use Energy Efficiency activities are implemented
3.1.2 (a)	Project Area, Boundary and Scale: Project Area and Boundary shall be defined in line with the applicable Methodologies or Product Requirements. The definition of scale is the same for all Projects, except Microscale which is defined as: (a) Project issuing emission reductions less than or equal to 10,000 tCO₂eq	See equivalent criterion under GS4GG Principles & Requirement above
3.1.4 a)	Legal ownership: Projects involving the distribution of a large number of devices for services such as heating, cooking, lighting, electricity generation, water treatment technology such as water filter, etc. shall provide a clear description of the ownership of the Products that are generated under Gold Standard Certification all along the investment chain. In line with FPIC requirement, the proofs that end-users are aware of and willing to give up their rights on Products shall be provided.	See equivalent criterion under GS4GG Principles & Requirement above and VPA inclusion criterion No.

3.1.4 b)	The transfer of Product ownership shall be discussed during local stakeholder consultations for regular cycle projects. For retroactive projects, the project participants shall collect stakeholder feedback through live consultations, telephone discussions, electronic mode, etc. as deemed necessary to reach out to the relevant stakeholders.	Discussion of the transfer of product ownership at LSC will be required as per VPA inclusion criterion.
----------	---	---

A.4. Target/Indicator for each of the minimum three SDGs targeted by the PoA

SDGs assessment is conducted at the VPA level. CME shall provide the information in the VPA DD and may also summarize the outcome in the Table below.

Sustainable Development Goals Targeted	Most relevant SDG Target	SDG Impact
		Indicator (Selected in SDG tool)
13 Climate Action	N/A	Reduced GHG emissions
3 Good health and wellbeing	3.9 By 2030, substantially reduce the number of deaths and illnesses from hazardous chemicals and air, water and soil pollution and contamination	• Avoided kitchen smoke exposure • Reduced reported health impacts of kitchen smoke
5 Gender equality	5.4 Recognize and value unpaid care and domestic work through the provision of public services, infrastructure and social protection policies and the promotion of shared responsibility within the	Time saved by women from faster cooking

	household and the family as nationally appropriate	
7 Affordable and clean energy	7.1 By 2030, ensure universal access to affordable, reliable and modern energy services	Access to clean cooking technology
<i>Evaluated optionally at VPA level</i>		
1 No poverty	1.1 By 2030, eradicate extreme poverty for all people everywhere, currently measured as people living on less than \$1.25 a day	Reduced expenses for fuelwood
8 Decent work and economic growth	8.5 By 2030, achieve full and productive employment and decent work for all women and men, including for young people and persons with disabilities, and equal pay for work of equal value	Employment generation

A.5. Coordinating/managing entity

Emerging Cooking Solutions Sweden AB (ECS)
Please refer Appendix for the contact information.

A.6. Funding sources of PoA

VPAs under the PoA will be funded by different sources, of which carbon credits constitute the most important one.

SECTION B. MANAGEMENT SYSTEM AND INCLUSION CRITERIA

B.1. Management System

ECS is the CME for this PoA and will be responsible for the overall operation, management, implementation and monitoring of the PoA.

The CME will sign an agreement with each VPA implementer to ensure the project implementation will be done in line with the approved design of the PoA. The below mentioned roles will be done by CME:

- Inclusion of VPAs, confirming that all eligibility requirements are met
- Channeling carbon finance for project implementation
- Coordinating and managing the implementation of the monitoring plan
- Coordinating with VVB / Gold Standard for design certification and performance certifications.

The following diagram represents the management structure of the PoA. This structure may still be amended and adapted for each VPA. CME, VPA implementor and technology provider may be one and the same entity.

(a) Roles and responsibilities

The CME has the competencies to check the features of potential VPAs and ensure that each VPA meets the eligibilities criteria. There will be a person in the CME who will take the final decision on VPA inclusions and coordinating monitoring and data management,

for example, coordinating the numbering system of project devices (improved cook stove) under the different VPAs to avoid double counting.

(b) Training and capacity development

The CME ensures that VPA implementers organize trainings for their staff, in order to ensure that device implementation/distribution occurs in accordance to the requirements of the PoA and particularly that monitoring activities are conducted as per requirements. The CME will keep track of such trainings.

(c) Procedure for technical review of VPA inclusion

Each VPA to be included into the PoA will be checked by the CME against eligibility criteria. The responsible person at the CME will check the following:

- Overall general completeness of the VPA documentation (technology, institutions involved, additionality, etc.)
- Technical review of the proposed VPA, focused on:
 - Technology and Baseline
 - Integration with the proposed monitoring system
 - GS eligibility criteria
- VPA inclusion criteria provided in the PoA-DD

(d) Double counting

In each VPA-DD it will be stated that the VPA has not been and will not be registered neither as a stand-alone project activity nor as a VPA under another PoA under the Gold Standard or any other carbon standard. The unique numbers allocated to each project devices under the PoA will allow unique identification and tracking of the stove. Due to the unique number, a device can only count in one VPA.

(e) Records and documentation control process for VPA under the PoA

The CME, together with the implementing partners, will define a numbering system for project devices. The unique numbers allocated to each device under the PoA allow unique identification and tracking of the stove. For each VPA under the PoA, digital databases will be established and maintained, probably in connection with a

smartphone-based monitoring tool such as Kobotoolbox³. Databases will contain at least the following information per VPA:

- Name and ID of the VPA, date of inclusion and start of VPA crediting period
- Information for each of the devices deployed, including:
 - Technology
 - Serial numbers (device-ID)
 - User contact data
 - Date of distribution/installation

The record keeping system will be updated as per the progress of the VPA. CMEs and implementing partners will regularly check the systems to ensure that it is up to date. Annual monitoring surveys will be conducted based on the entries of the database. Data will be kept for the whole crediting period of the VPA and an additional two years.

(f) Continuous improvements of the PoA management system

On an annual basis, the CME will undertake the review of the overall PoA management system, including identifying any problems with VPA inclusion or coordination of project device distribution or monitoring. This review will take place during the verification and monitoring stage that will help the CME in obtaining an outside perspective of the overall management process.

(g) Any other relevant elements

n.a.

B.2. Application of methodologies

The project applies the Gold Standard Methodology: Gold Standard “Methodology for metered & measured energy cooking devices”⁴, version 1.2.

³ <https://www.kobotoolbox.org/>

⁴ https://globalgoals.goldstandard.org/standards/431_V1.1_EE_ICS_Methodology-for-Metered-and-Measured-Energy-Cooking-Devices.pdf

Eligibility of microgasifier stoves with biomass pellet: This technology is not mentioned explicitly in the methodology, but in terms of eligibility, they are similar to ethanol stoves mentioned in par. 2.1.2 d). Pellet fuel purchased by each customer for cooking is recorded and alternative uses are prevented (by the high prices of pellets and missing suitability for alternative uses). A detailed discussion is found in the VPA-DD of VPA 1, section B.2).

B.2.1. Multiple technologies/measures

n.a.

B.3. Eligibility criteria for inclusion of a VPA in the PoA

No.	Eligibility Criterion	Description/ Required condition	Means of Verification/Supporting evidence for inclusion
1	The Geographical boundaries of VPAs are consistent with the geographical boundary of the PoA	The geographical boundary of the VPA is within the geographical boundary of the PoA	Evidence for inclusion: VPA-DD section A.2, specifying location and boundary of the VPA.
2	Conditions to avoid double counting of Impacts, such as unique identifications of product and end user locations	A unique numbering system for households (contract reference) will be applied in each VPA, assigning a unique number to each participating household and allowing to clearly identify for each household to which VPA it belongs. There may be households in neighboring areas belonging to different VPAs. Additionally, stoves will have a unique stove serial number.	Evidence for inclusion: VPA-DD section B.7.3, describing the unique household numbering system used under the VPA (for households and ICS).
3	Conditions to confirm that VPAs are neither registered as project activities with other offset Schemes, included in other registered PoAs, nor the	The VPA, nor any of its devices is not yet registered and not being registered as a standalone project under other carbon standards by ensuring that the VPAs has the full title over the emission reductions generated by the users listed in the VPA.	Evidence for inclusion: Mechanism to ensure the transfer of legal ownership to the emission reductions to the CME, section A.1.2 of the VPA-DD.

	project activities that have been deregistered;		
4	Specification of the technology/measure such as the level and type of service, as well as performance specification based on, inter alia, testing/certification;	VPAs under this PoA will consist in the distribution of advanced cook stoves to users predominantly cooking with non-renewable biomass on traditional biomass stoves in the baseline scenario (mainly charcoal stoves, also wood stoves eligible). The improved cook stove technology will have a thermal efficiency of at least 40%.	Evidence for inclusion: VPA-DD section A.3, specifying on type(s) of cook stove technology and efficiency. VPA-DD section B.4, explaining the baseline scenario.
5	Conditions to check the start dates of V/CPAs through documentary evidence;	A start date will be specifying with each VPA All VPAs will have the start date not earlier than one year before the start date of the PoA.	Evidence for inclusion: VPA-DD section C.1.1, specifying the start date.
6	Conditions to ensure compliance with the applicability of the applied methodologies, the applied standardized baselines and the other applied methodological regulatory documents	Each VPA will meet the applicability criteria of the Gold Standard Methodology for Metered & Measured Energy Cooking Devices 1.2.	Section B.2 of each VPA-DD shows the that the inclusion criteria for methodology application are met.
7	Conditions to ensure that V/CPAs meet the requirements for demonstration of additionality	Each VPA will demonstrate automatic additionality according to the GS community services activity requirements section 4.1.9. (c) – Microscale projects. As the PoA and VPAs are fall under microscale projects, hence deemed additional.	VPA-DD section B.5 showing automatic additionality.
8	Conditions to ensure no diversion of official development assistance;	There will be no diversion of ODA for any of the proposed VPAs	A declaration of non-use of ODA will be provided with each VPA, and a corresponding statement will be made in section A.5 of each VPA-DD.
9	Target group (e.g. domestic/commercial/industrial,	The PoA will target households and institutions that mainly depend on charcoal and/or fuelwood for cooking, located in	VPA-DD sections A.3 and B.4

	rural/urban, gridconnected/offgrid), and where applicable, distribution mechanisms (e.g. direct installation)	urban, semi-urban and rural areas within the host countries. Project devices will be installed directly in the participating households.	
10	Conditions related to sampling requirements for the PoA	Conditions are in line with the Gold Standard Methodology for Metered & Measured Energy Cooking Devices 1.2. (Sampling may not be required since 100% fuel consumption is measured for SDG 13).	B.7.2 of each VPA-DD
11	Conditions to ensure that VPAs that will be included meet the small-scale or microscale thresholds and remain within those thresholds throughout the crediting period (N/A if all units qualify as "microscale CDM units")	N/A All units qualify as microscale CDM units because power ratings of cookstoves will always be <150kW according to MECD version 1.2, criterion 2.2.b)	N/A
12	Conditions to confirm that technologies in V/CPAs are eligible	Covered by inclusion criterion 4	Covered by inclusion criterion 4
13	Conditions to be met by each VPA regarding SDG outcomes assessment	Positive outcomes expected for at least 3 SDGs.	VPA-DD section B.6.4
14	(if applicable) Conditions to be met by each VPA regarding safeguarding principles	The safeguarding principles assessment is conducted at VPA level.	Appendix 1 of the VPA-DD.
15	Eligibility as per Community Services Activity Requirements	As described in the assessment at PoA level (see PoA-DD A.3), specific criteria to be met at VPA-level are covered by eligibility criterion No. 4 (technology	Eligibility of technology covered by inclusion criterion 4.

		includes end-use energy efficiency) and legal ownership (clear description of ownership, proofs that end users are aware and willing to give up rights on products) and discussion of the transfer of ownership during LSCs.	Conditions on legal ownership: - Clear description in A.1.2 LSC report showing discussion on transfer of ownership.
16	Eligibility as per GHG Emissions Reduction & Sequestration criteria	The relevant criteria include: - Only microscale VPAs are allowed under a microscale PoA (criterion 2.1.3) - There is no mandatory operational scheme to reduce GHG emissions (3.1.1) - The VPA belongs to an eligible project type: End-use energy efficiency improvement (5.1.1.b)	- Section A.4 of the VPA-DD - Confirmation that no such mandatory scheme exists in the country of the VPA - Section A.3 of the VPA-DD, showing that the technology consists in efficient cookstoves, implying type of End-use energy efficiency improvement
17	Conditions to be met for a VPAs in another country than Zambia (condition for multi-country PoA)	The VPA must apply a similar technology; it must consist in the distribution of advanced cooking technologies eligible under the "Methodology for metered & measured energy cooking devices", and it must meet the eligibility criteria of this methodology. Moreover, a physical stakeholder consultation must be organized in cases where required according to PoA requirements (see section E of this PoA-DD).	VPA-DD section A.3, specifying the technology used. VPA-DD section B.2, explaining the applicability of the methodology. VPA-DD section F on regular VPA inclusion criteria; VPA-DD section E on on physical stakeholder consultations.

SECTION C. DEMONSTRATION OF ADDITIONALITY

All VPAs under the PoA consist in voluntary activities that are dependent on carbon funding and would therefore not be conducted in absence of the PoA.

The proposed PoA is a Microscale activity as annual generation of emission reductions is limited to a maximum of 10,000 tonnes of CO₂eq at each VPA level.

The PoA is deemed additional as a whole according to the GS4GG Community-Services Activity Requirements section 4.1.9 (c).

SECTION D. DURATION OF PoA

D.1. Date of first submission of PoA to Gold Standard

26/12/2021

D.2. Duration of the PoA

20 Years 0 Months

SECTION E. OUTCOME OF PoA LEVEL STAKEHOLDER CONSULTATION

Consultations were conducted at both the PoA level (Design Consultation) and the VPA level (Stakeholder Consultation of the 1st VPA in Zambia).

A new stakeholder meeting will be conducted for each new real case VPA, so that a grouped meeting can cover different VPAs implemented by the same partner in the same geographical region. For future regular VPAs PoA requirements par. 5.7.2 are complied with:

- a. Regular VPAs are implemented within the geographic boundary of one host country.
- b. The geographical boundary of a group stakeholder consultation is defined clearly and stakeholders invited accordingly.
- c. During the group stakeholder consultation, stakeholders are explained the period for which the consultation is valid and intentions to add new VPAs to the PoA.
- d. Regular VPAs are submitted for inclusion within two years of the grouped physical meeting.
- e. The stakeholder consultation report is submitted to Gold Standard with inclusion request for 1st regular VPA of the group.
- f. For all such regular VPAs, feedback is gathered from relevant local stakeholders on a sample basis as part of ongoing feedback mechanism.

E.1. Summary of stakeholder consultation at PoA Level

No necessary mitigation measures identified.

During the stakeholder consultation in Lusaka on Dec 14 2021, the PoA was explained to stakeholders, and the technology was demonstrated. Potential impacts were discussed. Stakeholders' feedback was focused on faster upscaling of the PoA and on the possibility to attend rural areas – which is not possible at present due to logistic constraints, but may be possible in the future.

Please refer to the separate Stakeholder Consultation Report for a complete report on the initial consultation and stakeholder feedback round.

E.2. Consideration of stakeholder comments received

No necessary mitigation measures identified.

E.3. Final Continuous Input / Grievance Mechanism at PoA Level
